Introduction

1. The International Law Commission, at its fifty-ninth session, in 2007, decided to include the topic “Protection of persons in the event of disasters” in its programme of work and appointed Mr. Eduardo Valencia-Ospina as Special Rapporteur.

2. At its sixtieth session, in 2008, the Commission had before it the preliminary report of the Special Rapporteur,1 tracing the evolution of the protection of persons in the event of disasters, identifying the sources of the law on the topic, as well as previous efforts towards codification and development of the law in the area. It also presented in broad outline the various aspects of the general scope with a view to identifying the main legal questions to be covered and advancing tentative conclusions without prejudice to the outcome of the discussion that the report aimed to trigger in the Commission. The Commission also had before it a memorandum it had requested from the Secretariat, focusing primarily on natural disasters2 and providing an overview of existing legal instruments and texts applicable to a variety of aspects of disaster prevention and relief assistance, as well as of the protection of persons in the event of disasters.

3. The Commission considered, at its sixty-first session, in 2009, the second report of the Special Rapporteur3 analysing the scope of the topic ratione materiae, ratione personae and ratione temporis, and issues relating to the definition of “disaster” for purposes of the topic, as well as undertaking a consideration of the basic duty to cooperate. The report contained proposals for draft articles 1 (Scope), 2 (Definition of disaster) and 3 (Duty to cooperate). The Commission also had before it written replies submitted by the Office for the Coordination of Humanitarian Affairs (OCHA) and the International Federation of Red Cross and Red Crescent Societies (IFRC) to the questions addressed to them by the Commission in 2008.

4. At the sixty-second session of the Commission, in 2010, the Special Rapporteur submitted his third report on the topic,4 in which he provided an overview of the comments of States and IFRC made in the Sixth Committee of the General Assembly on the work undertaken by the Commission up to that time. He then examined the principles that inspired the protection of persons in the event of disasters, in its aspect related to persons in need of protection, and the question of the responsibility of the affected State. The report contained proposals for three further draft articles: 6 (Humanitarian principles in disaster response), 7 (Human dignity) and 8 (Primary responsibility of the affected State).

5. At its sixty-third session, in 2011, the Commission had before it the fourth report of the Special Rapporteur,5 providing an overview of the views of States and IFRC expressed in the Sixth Committee on the work accomplished by the Commission thus far, a consideration of the responsibility of the affected State to seek assistance where its national response capacity is exceeded, the duty of the affected State not to arbitrarily withhold its consent (including to the right to offer assistance in the international community). Proposals for the following three further draft articles were made in the report: draft articles 10 (Duty of the affected State to seek assistance), 11 (Duty of the affected State not to arbitrarily withhold its consent) and 12 (Right to offer assistance).

6. At its sixty-first session, in 2009, the Commission, on 31 July 2009, took note of draft articles 1 to 5, as

---

1. The Special Rapporteur expresses his appreciation for their assistance in the preparation of the present report to the following: René Uruela, Ph.D., Director, International Law and L.L.M. Programmes, and Santiago Rojas, J.D. candidate, Faculty of Law, University of Los Andes, Bogotá; Leah Campbell, L.L.M., and Madeline Snider, J.D. candidate, New York University School of Law, New York; Christodoulos Koutzianis, L.L.M. and Ph.D. candidate, Columbia University, New York; Emika Tokunaga, Ph.D. candidate and Visiting Researcher, School of International Public Policy, Osaka University, Osaka, Japan; Ana Polak Petric, Ph.D. candidate, European Law Faculty, Slovenia; Yann Dehaudt-Delville, L.L.M. and Magistère de Droit candidate, the Sorbonne Law School, University of Paris I Panthéon-Sorbonne, Paris; Aaron Marcus, J.D. candidate, Harvard Law School, Cambridge, Massachusetts; Marnie Ajello, Zach Bench, Maria Valentina Castillo, Ekta Dharia, Ryan Farha, Alexandra Filippova, Sarah Fink, Ashley Gaillard, Frederic Hall, Thayer Hardwick, Hilary Harris, Mia Psorn, Justin Schwegel and Melissa Stewart, the Global Law Scholars, Class of 2013, Georgetown University Law Center, Washington, D.C.; and Paul R. Walegur, The Hague.

3. A/CN.4/590 and Add.1–3 (available from the Commission’s website, documents of the sixtieth session; the final text will be published as an addendum to Yearbook ... 2008, vol. II (Part One)).
provisionally adopted by the Drafting Committee. The Commission, on 20 July 2010, took note of draft articles 6 to 9, as provisionally adopted by the Drafting Committee.

7. At its sixty-second session, in 2010, the Commission, on 4 June 2010, adopted the report of the Drafting Committee on draft articles 1 to 5, which had been considered at the Commission’s previous session. Commentaries to draft articles 1 to 5 were likewise adopted by the Commission, on 2 August 2010. The text of draft articles 1 to 5, with commentaries, was reproduced in the report of the Commission on the work of its sixty-second session.

8. The Commission, at its sixty-third session, in 2011, adopted, on 11 July 2011, the report of the Drafting Committee on draft articles 6 to 9, which had been considered at the Commission’s previous session. The Commission further adopted the report of the Drafting Committee on draft articles 10 and 11, on 2 August 2011. On 9 August 2011, the Commission adopted commentaries to draft articles 6 to 11. The text of draft articles 6 to 11, with commentaries, was reproduced in the report of the Commission on the work of its sixty-third session.

9. Also at its sixty-third session, the Commission, on 18 July 2011, referred to the Drafting Committee draft article 12, together with draft articles 10 and 11, proposed by the Special Rapporteur in his fourth report. However, owing to the lack of time, the Drafting Committee could not provisionally adopt draft article 12 at that session.

Chapter I

Comments made in the Sixth Committee by States and organizations

10. In 2011, the Sixth Committee considered, under agenda item 81, the report of the Commission on the work of its sixty-third session, chapter IX of which concerned the topic “Protection of persons in the event of disasters”. The interventions of States concentrated on the text of draft articles 5 to 11 and commentaries thereto already adopted by the Commission, as well as on the content of draft article 12 as proposed by the Special Rapporteur in his fourth report. Representatives also referred to the points related to the present topic included in the chapter of the Commission’s report entitled “Specific issues on which comments would be of particular interest to the Commission”.

11. In its report, the Commission reiterated that it would welcome any information concerning the practice of States under the present topic, including examples of domestic legislation, in particular information and comments on specific legal and institutional problems encountered in dealing with or responding to disasters. In this respect Austria, Hungary and Indonesia made reference to their national legislation dealing with disaster relief. The European Union elaborated on its instruments in the field of humanitarian assistance and civil protection, while IFRC highlighted some of the most recent developments in its activities related to International Disaster Response Law.

A. General comments

12. As in previous years, the debate in the Sixth Committee evidenced the great interest of States and organizations in the topic. States in general welcomed the progress achieved by the Commission in a short time, emphasizing the importance and timeliness of the topic in the light of the rising number of losses produced by natural disasters. They recognized that the Commission’s work of codification and progressive development would greatly contribute to the development of disaster response law and commended its efforts in clarifying the specific legal framework pertaining to access in disaster situations, the inclusion of the fundamental principles governing disaster relief and the recognition of several duties on the part of affected States. Several States acknowledged that such undertakings would help to improve the efficiency and quality of humanitarian assistance and mitigate the
consequences of disasters.\textsuperscript{29} One delegation, for example, noted that “the Commission had chosen to focus on matters of great current significance and had shown itself to be in tune with existing trends in international practice”.\textsuperscript{30}

13. As a general remark and a point of departure for the debate on specific draft articles, several States praised the Commission for striking the proper balance between the need to protect the persons affected by disasters and respect for the principles of State sovereignty and non-interference.\textsuperscript{31} Some delegations underlined that response to disasters, and consequently the draft articles prepared by the Commission, should always be based on full respect for the sovereignty of the affected State and should not allow humanitarian assistance to be politicized or be made an excuse for interfering in the internal affairs of the affected State.\textsuperscript{32} The importance of international solidarity in the event of disasters was also emphasized.\textsuperscript{33}

14. While the Commission’s recognition of the role of international organizations and other humanitarian actors in the protection of persons in the event of disasters was welcomed, it was deemed unclear whether the respective draft articles also included regional integration organizations, such as the European Union.\textsuperscript{34}

15. It was suggested that the proposed scope of the draft articles was too narrow with respect to the events to be covered and therefore should be extended to a wider range of pre-disaster activities relating to risk reduction, prevention, preparedness and mitigation.\textsuperscript{35} It was also felt that the draft articles themselves should focus on operational matters.\textsuperscript{36} In addition, it was stressed that non-binding guidelines or a framework of principles for States and other parties engaged in disaster relief would be more practical and more likely to enjoy wide support.\textsuperscript{37}

16. States endorsed the Commission’s view based on the position of the Secretary-General of the United Nations that the concept of “responsibility to protect” fell outside the scope of the topic and applied only to four specific crimes: genocide, war crimes, ethnic cleansing and crimes against humanity.\textsuperscript{38} For the Secretary-General, extending the concept of “responsibility to protect” to include the response to natural disasters would stretch it beyond recognition or operational utility. Nevertheless, one delegation maintained that since “responsibility to protect” was among the most dynamically developing and innovative concepts in international relations, further careful consideration should be given to the appropriateness of extending it to natural disasters.\textsuperscript{39}

\textbf{B. Draft articles 5–8}

17. Regarding draft article 5 (Duty to cooperate), States emphasized its importance since cooperation was essential to successful disaster relief and protection of persons in need.\textsuperscript{40} Nevertheless, a call for further clarification of draft article 5 was made, in order to enable States to understand the extent of their obligations.\textsuperscript{41}

18. With respect to draft article 6 (Humanitarian principles in disaster response), the Special Rapporteur was commended for recognizing the core role played by the principles of humanity, neutrality, impartiality and non-discrimination in the coordination and implementation of disaster relief.\textsuperscript{42} Support was expressed for the Commission’s view in the commentary that it was not necessary to determine whether the three humanitarian principles of humanity, neutrality and impartiality in the draft article were general principles of international law.\textsuperscript{43} The suggestion was made to clarify the term “the particularly vulnerable” concerning the application of humanitarian principles in disaster response.\textsuperscript{44}

19. One delegation favoured formulating a new draft article to reflect the principles of the Charter of the United Nations and the guiding principles of humanitarian assistance set out in General Assembly resolution 46/182 of 19 December 1991.\textsuperscript{45}

20. Two delegations proposed that draft articles 7 and 8, as they addressed key principles, should be better placed at the beginning of the text of the future instrument or in its preamble.\textsuperscript{46}

21. Draft article 7 (Human dignity) was deemed especially significant, since it was the first time that...
it had appeared as an autonomous provision in the body of a future international instrument and it stood as a reminder that the protection of human beings lay at the heart of the topic. It was pointed out that, as recognized in the corresponding commentary, the duty to “respect and protect” was very broad, encompassing both a negative obligation to refrain from injuring the dignity of the human person and a positive obligation to maintain that dignity. The State, given its primary role in disaster response, also had the primary role in fulfilling that duty.47

22. With regard to draft article 8 (Human rights), it was said that in comparison to draft article 7, its wording was too general and vague and raised questions regarding its scope and interpretation.48 The view was also expressed that the commentary should elaborate further on the meaning of human rights by referring to the protection of rights relating to the provision of food, health, shelter and education, housing, land and property, livelihoods and secondary and higher education; and documentation, movement, re-establishment of family ties, expression and opinion, and elections.49

C. Draft article 9

23. Draft article 9 (Role of the affected State), premised on the core principle of State sovereignty and establishing a duty of the affected State to ensure the protection of persons and the provision of relief and assistance on its territory, met with general approval.23 Although the affected State was best placed to assess its needs in that regard, its responsibility should not remain exclusive.51 Additional consideration should be given to the affected State’s duty towards the international community as a whole, since inaction could affect not only its own territory but also that of its neighbours.52 The use of the term “duty” in draft article 9 was welcomed for various reasons, especially in order to avoid any confusion with the concept of “responsibility”53 and as the appropriate means of reconciling the two desiderata of preserving State sovereignty and protecting the affected population.54 It was also said that the text would benefit from a specific reference to persons with disabilities.55

D. Draft article 10

24. Concerning draft article 10 (Duty of the affected State to seek assistance), many delegations welcomed establishing as legal, and not as moral or political, the duty of the affected State to seek assistance. They agreed that the duty established therein derived from the affected State’s obligations under international human rights instruments and customary international law, and that the protection of various human rights directly implicated in the context of disasters, such as the right to life, food, health and medical care, was essential.56 In this connection, it was recommended that among the human rights listed in the commentary a reference to the right to access to fresh water should be added.57

25. Since the affected State did not have unlimited discretion regarding its consent to external assistance, which it was obliged to seek if the disaster exceeded its response capacity, a suggestion was made that situations in which the affected State might be unwilling to provide assistance and protection should also be addressed.58

26. Attention was drawn to the preamble of the Council of the European Union Regulation No. 1257/96 concerning humanitarian aid, which stated that “people in distress, victims of natural disasters, wars and outbreaks of fighting, or other comparable exceptional circumstances have a right to international humanitarian assistance where their own authorities prove unable to provide effective relief.”59

27. It was suggested that the fact that the Government of an affected State was in the best position to determine the severity of a disaster and the limits of its own response capacity be reflected in the text of draft article 10.60

28. On the other hand, a number of States opposed the idea that the affected State was placed under a legal obligation to seek external assistance in cases where a disaster exceeded its national response capacity. In their view, the imposition of such a duty constituted infringement of the sovereignty of States as well as of international cooperation and solidarity, and had no basis in existing international law, customary law or State practice. It was preferable that the provision of draft article 10 be reworded in hortatory terms, namely, to use

instead of the mandatory phrase “duty to seek assistance” the formulation “should seek assistance”.61

29. As stated by one delegation, the relationship between the affected State and the international community in disaster situations should not be defined in terms of rights and duties, but rather be considered from the perspective of international cooperation, not only in draft article 10 but also in draft articles 11, paragraph 2, and 12.62

30. Some delegations drew attention to the importance of the last part of draft article 10, namely, that the affected State was free to choose among the various enumerated external actors offering assistance, as indicated by the phrase “as appropriate”.63 In that connection, the view was expressed that inclusion of the words “as appropriate” in the draft article contributed to strengthening the affected State’s discretion in determining and choosing the best assistance provider, since an affected State was in the best position to determine the gravity of an emergency situation on its territory and to frame appropriate responses.64 Conversely, a suggestion was made to exclude those words so as to emphasize the discretionary power of the affected State.65

31. The opinion was expressed that the clause “to the extent that a disaster exceeds its national response capacity” raised questions as to the manner in which the national response capacity was assessed, and therefore it should be further elaborated.66 In that connection, support was voiced for reverting to the wording originally proposed by the Special Rapporteur in his fourth report: “If the disaster exceeds its national response capacity”.67

32. There were some additional suggestions in respect of draft article 10. One State proposed that the draft article should be reworded so as to make it clear that States were free to request assistance from any of the enumerated actors or from others not mentioned in the draft article in the light of general human rights law.68 For some delegations, it would be useful to provide incentives for the affected State to seek assistance at an even earlier stage in order to avoid delays in the provision of assistance.69 It was also suggested that a distinction should be made between States and international organizations on the one hand and relevant non-governmental organizations on the other, since it was not incumbent on the affected State to seek assistance from the latter.70

E. Draft article 11

33. It was suggested that the words “without prejudice to article 10” be added at the beginning of draft article 11 (Consent of the affected State to external assistance) for the sake of harmony.71

34. General agreement was expressed with paragraph 1 of draft article 11, which reflected the core principle, fundamental to international law, that implementation of international relief assistance was contingent upon the consent of the affected State, which was fully in line with the principle of State sovereignty.72 However, concern was manifested at imposing such a legal obligation, which could undermine the current practice of international cooperation and solidarity.73

35. The opinion was expressed that although the requirement to obtain the consent of the affected State was reasonable, it could cause delay in cases where rapid reaction was needed.74 It was also stated that draft article 11 should categorically refuse to allow consent to be implied or dispensed completely in situations where a lack of consent would not bar the provision of assistance. The situation where there was no functioning Government to provide consent might be acceptable from a humanitarian standpoint but raised questions as to who should decide whether a Government, functioning or otherwise, existed.75

36. A number of States welcomed paragraph 2 of draft article 11, which stipulates that the consent to external assistance by the affected State should not be withheld arbitrarily, underlining that the affected State had both a right and a duty to assist its own population.76

37. In the opinion of one State, an additional study on the relationship between international cooperation and international principles would be helpful in establishing

possible derogations to those of sovereignty and non-intervention. A State should bear the responsibility for its refusal to accept assistance, since such a refusal could give rise to an internationally wrongful act if it undermined the rights of the affected persons under international law.\textsuperscript{77} It was explained by another State that the duties to cooperate, to seek assistance and to refrain from arbitrarily withholding consent imposed an obligation of conduct or means, not of result, on the affected State, which was obliged to give good faith consideration to the possibility of accepting assistance from another State or from an international actor and could not withhold its consent arbitrarily.\textsuperscript{78} Another delegation concurred with this provision of draft article 11 but warned that under existing international law other States would not be able to act without the consent of the affected State, even if the latter incurred international responsibility by refusing assistance.\textsuperscript{79}

38. Some States insisted that, based on the principle of sovereignty, the affected State had a right to decide whether to request or accept humanitarian assistance and that no customary international law or State practice provided for the obligation on the part of an affected State to accept outside assistance.\textsuperscript{80} One delegation preferred that the draft articles, rather than imposing a strictly legal obligation that would entail international legal consequences in the event of noncompliance, should determine that the affected State had simply a moral and political duty to seek assistance and not to withhold arbitrarily its consent to external assistance.\textsuperscript{81}

39. A number of States considered that the term “arbitrarily” in paragraph 2 of the draft article could give rise to difficulties of interpretation, including the questions on how arbitrary refusal would be determined, who was to make such an assessment, or what its consequences would be, among others, and therefore it should be clarified in both the text and the commentary.\textsuperscript{82}

40. Some States made concrete suggestions of a textual nature. Thus, it was felt worth considering whether the term “unreasonably” should be substituted for “arbitrarily.”\textsuperscript{83} In addition, it was suggested that an explanation should be added to the text as follows: “[Withholding of] consent is considered to be arbitrary, in particular when in contravention of article 8.”\textsuperscript{84} In the opinion of one State, no refusal was arbitrary, for instance, if the affected State had previously accepted appropriate assistance from another source. In the State’s view, the necessary guarantees should be provided—including by underlining the relevant principles of the Charter of the United Nations—to ensure that the cause of humanitarian assistance was not abused with a view to undermining the sovereign rights of the affected State and interfering in its internal affairs. It was thus suggested that paragraph 2 should be amended to read: “Consent to external assistance offered in good faith and exclusively intended to provide humanitarian assistance shall not be withheld arbitrarily and unjustifiably.”\textsuperscript{85}

41. With reference to paragraph 3 of article 11, some States argued that the expression “whenever possible” could raise difficulties in communicating the decision regarding the acceptance of assistance, adversely affecting populations in urgent need of such assistance. The affected State’s discretion in communicating such a decision should be narrowed in order to cover cases where a decision proved impossible. It would help to clarify who was expected to make a formal offer of assistance to the affected State.\textsuperscript{86}

42. One State proposed to divide paragraph 3 in order to express two distinct ideas: first, that the State had a duty to communicate its response to an offer of assistance in a timely manner; and, second, that in extreme situations States might, for good cause, not be able to respond immediately, or indeed at all, to an offer of assistance.\textsuperscript{87} It was explained that neither the International Red Cross and Red Crescent Movement nor foreign non-governmental organizations tend to make formal offers of assistance to States. It was also stated that it was unclear in draft article 11 whether there was an implied temporal deadline for responding to offers of assistance.\textsuperscript{88}

43. The suggestion was made that the order of draft articles 11 and 12 should be reversed, with the right of third States and other entities to offer assistance being stated first.\textsuperscript{89}

F. The right to offer assistance (proposed draft article 12)

44. A number of delegations addressed the inclusion of a further draft article on the right of assisting actors to offer assistance to the affected State, as proposed by the Special Rapporteur in his fourth report (proposed draft article 12).\textsuperscript{90} As already explained,\textsuperscript{91} proposed article 12 has been considered by the Commission in plenary, which referred it to the Drafting Committee. Many States expressed agreement with such a proposal, maintaining that it acknowledged the interest of the international community in the protection of persons in the event of

\textsuperscript{77} Portugal, ibid., 24th meeting (A/C.6/66/SR.24), para. 66.

\textsuperscript{78} Colombia, ibid., 22nd meeting (A/C.6/66/SR.22), para. 27.

\textsuperscript{79} Austria, ibid., 23rd meeting (A/C.6/66/SR.23), para. 24.

\textsuperscript{80} Cuba, ibid., 24th meeting (A/C.6/66/SR.24), para. 27; Indonesia, ibid., para. 70; China, ibid., 23rd meeting (A/C.6/66/SR.23), para. 42.

\textsuperscript{81} Russian Federation, ibid., 24th meeting (A/C.6/66/SR.24), para. 37.

\textsuperscript{82} Israel, ibid., 23rd meeting (A/C.6/66/SR.23), para. 33; France, ibid., para. 39; China, ibid., para. 42; United Kingdom, ibid., para. 45; Netherlands, ibid., para. 48; Malaysia, ibid., 24th meeting (A/C.6/66/SR.24), para. 117–119; Argentina, ibid., 25th meeting (A/C.6/66/SR.25), para. 10; Ireland, ibid., para. 22; Algeria, ibid., para. 33; Sri Lanka, ibid., 27th meeting (A/C.6/66/SR.27), para. 20.

\textsuperscript{83} Netherlands, ibid., 23rd meeting (A/C.6/66/SR.23), para. 48.

\textsuperscript{84} Greece, ibid., 24th meeting (A/C.6/66/SR.24), para. 25.
a disaster, which should be viewed as complementary to the primary responsibility of the affected State and as an expression of solidarity and cooperation, and not as interference in its internal affairs. It was stressed that this right of assisting actors was merely to “offer”, not to “provide”, assistance and the affected State remained, in line with the principle of sovereignty and notwithstanding draft articles 10 and 11, free to accept in whole or in part any offers of assistance from States and non-State actors, whether made unilaterally or in answer to an appeal.92 A suggestion was made that the proposed draft article should be reformulated so as to extend the right to offer assistance to all persons, both natural and legal.93

45. One State added that offers of assistance should not be considered as interference in the internal affairs of the affected State, provided that the assistance offered did not affect the latter’s sovereignty or its primary role in the direction, control, coordination and supervision of such assistance.94 A suggestion was made to formulate this provision as a positive duty of the international community, this being a part of international cooperation.95 In that connection, it was stressed that draft article 5 already established a duty of cooperation on the part of all actors; therefore, draft articles 5 and 12, taken together, would put States and other actors under some pressure to offer assistance, which was only to be welcomed.96

46. Some States, however, agreed only with the general premise articulated in the draft article and urged to limit its applicable scope and conditions, without undermining the principle of non-interference in the internal affairs of the affected State.97 In that connection, it was suggested that the scope should be reduced to the “offer of assistance”.98

47. A number of States considered that the role of the international community in offering assistance to affected States should not be defined as an assertion of rights, and therefore should be reformulated on the basis of the principles of international cooperation and solidarity.99

100 It was also stated that some delegations believed that IFRC and its national societies did not fall within the categories mentioned in draft article 12.104 In addition, as already mentioned, it was felt necessary to consider whether the term “competent intergovernmental organizations” extended to regional integration organizations, such as the European Union.106

50. For some delegations the provision was superfluous, since States already had a sovereign right to make such offers in practice.107 One delegation suggested that, owing to the diverging views, the Commission should avoid a definitive pronouncement on those issues in the interest of facilitating the development of a product that would be of the most practical use to the international community.108

G. Duty to provide assistance (question posed by the Commission in its 2011 annual report)

51. The Commission, on 11 August 2011, and in the absence of the Special Rapporteur, agreed to the proposal of one member109 to also include in chapter III...
of its report on the session, entitled “Specific issues on which comments would be of particular interest to the Commission”, the following question addressed to States: “The Commission has taken the view that States have a duty to cooperate with the affected State in disaster relief matters. Does this duty to cooperate include a duty on States to provide assistance when requested by the affected State?”

52. No written replies to the question above had been received from States by the date of the present report. However, in the Sixth Committee, the many States that spoke on the point responded in the negative to the question posed, mainly arguing that such a duty had no basis in existing international law, customary law or practice, and that the creation of such a new duty would not only be controversial but would give rise to numerous legal and practical problems.

53. The view was expressed that the duty to cooperate should in this context be understood as simply a duty to consider requests for assistance made by the affected State, and was conditional upon a decision by the affected State that it required assistance and also upon the capacity of the assisting State to provide the assistance requested. Some suggestions were advanced to formulate the provision in a way to encourage or strongly recommend to non-affected actors cooperation and assistance on the basis of the principles of cooperation and international solidarity, or to only oblige States to “respond promptly” to a request made by the affected State. In the latter respect, reference was made to article 4 of the Association of Southeast Asian Nations (ASEAN) Agreement on Disaster Management and Emergency Response (hereinafter the “ASEAN Agreement”). It was also underlined that the question posed would have an impact on the practical operation of draft articles 10 and 11, since the duty to seek assistance in the event of disasters would need to be mutually supported by a corresponding duty to assist. Nevertheless, a binding obligation on States to provide assistance upon request could be deemed unacceptable interference in a State’s sovereign decision-making.

54. Support was expressed for the Special Rapporteur’s earlier understanding of the duty to cooperate.

### CHAPTER II

The Special Rapporteur’s position on the Commission’s question in its 2011 annual report

55. It falls now to the Special Rapporteur to address the Commission’s question in the light of relevant State practice and the comments made by States in response to that inquiry. As a starting point, it must be recalled that draft articles 5 and 10, provisionally adopted, enshrine the duty to cooperate and the duty of affected States to seek assistance, respectively. The issue singled out by the Commission involves the interrelationship between the legal duties established in both draft articles.

56. In this respect, international practice as evidenced in international treaties shows that, although underpinned by the principles of solidarity and cooperation, the provision of assistance from one State to another upon the latter’s request is premised on the voluntary character of the action of the assisting State. In this sense, article 4, paragraph 3, of the Tampere Convention on the Provision of Telecommunication Resources for Disaster Mitigation and Relief Operations provides that:

Each State Party to which a request for telecommunication assistance is directed, either directly or through the operational coordinator, shall promptly determine and notify the requesting State Party whether it will render the assistance requested, directly or otherwise, and the scope of, and terms, conditions, restrictions and cost, if any, applicable to such assistance.

57. In more explicit terms, the ASEAN Agreement establishes, in article 9, paragraph 1, that

On a voluntary basis, each Party shall earmark assets and capacities, which may be available for the regional standby arrangements for disaster relief and emergency response, such as:

(a) Emergency response/search and rescue directory;

(b) Military and civilian assets;

(c) Emergency stockpiles of disaster relief items; and

(d) Disaster management expertise and technologies.

58. In the above-mentioned instruments, it is made clear that the provision of assistance from one State to another must be made voluntarily, and thus no positive obligation to assist exists for the parties thereto. This practice is recognized by the Institute of International Law in article V of its 2003 resolution on humanitarian assistance, according to which:

Duties in respect of humanitarian assistance

1. All States should to the maximum extent possible offer humanitarian assistance to the victims in States affected by disasters, except when such assistance would result in seriously jeopardizing their own economic, social or political conditions. Special attention should be paid to disasters affecting neighbouring States.

2. Intergovernmental organizations shall offer humanitarian assistance to the victims of disasters in accordance with their own mandates and statutory mandates.

59. In this formulation, the hortatory term “should” regarding the provision of assistance by States stands in marked contrast with the mandatory formulation “shall” used when referring to intergovernmental organizations. Such differentiation implies that, although a duty to provide assistance may exist for intergovernmental organizations when their mandates so provide, no such duty exists for States. In this respect, States remain free to decide whether or not to provide assistance, even if requested to do so by an affected State.

60. Furthermore, the statement by the Institute of International Law that States should offer humanitarian assistance “except when such assistance would result in seriously jeopardizing their own economic, social or political conditions” indicates that the limits of a State’s capabilities are a pivotal criterion for the provision of humanitarian assistance. An obligation to provide assistance formulated in the abstract might represent in practice an excessive burden for those States that may not be in a position to adequately and effectively discharge their primary obligation towards their own populations, much less a duty towards those of third States. Solidarity and cooperation are of course central to the protection of persons in the event of disasters, which, as has been noted by the Special Rapporteur in his fourth report,118 is a project of the international community as a whole. However, they cannot be understood in such a way as to impair the capacity of States to comply, by virtue of their sovereignty, with their primary obligation towards their own people.

61. The limitation premised on the restricted capabilities of States finds confirmation in several international instruments. Among them is the Convention on assistance in the case of a nuclear accident or radiological emergency, which stipulates in article 2, paragraph 4, that

States Parties shall, within the limits of their capabilities, identify and notify the Agency of experts, equipment and materials which could be made available for the provision of assistance to other States Parties in the event of a nuclear accident or radiological emergency as well as the terms, especially financial, under which such assistance could be provided.

62. In turn, the aforementioned ASEAN Agreement embodies, in article 3, paragraph 3, the guiding principle that the Parties shall, in the spirit of solidarity and partnership and in accordance with their respective needs, capabilities and situations, strengthen cooperation and coordination to achieve the objectives of this Agreement.

63. And further, article 11, paragraph 6, provides that

The Parties shall, within the limits of their capabilities, identify and notify the AHA Centre of military and civilian personnel, experts, equipment, facilities and materials which could be made available for the provision of assistance to other Parties in the event of a disaster emergency as well as the terms, especially financial, under which such assistance could be provided.

64. The limitation is also recognized by the United Nations Committee on Economic, Social and Cultural Rights, which states in its General Comment No. 14 (2000),119 regarding the right to the highest attainable standard of health (art. 12 of the International Covenant on Economic, Social and Cultural Rights), that

States parties have a joint and individual responsibility, in accordance with the Charter of the United Nations and relevant resolutions of the United Nations General Assembly and of the World Health Assembly, to cooperate in providing disaster relief and humanitarian assistance in times of emergency, including assistance to refugees and internally displaced persons. Each State should contribute to this task to the maximum of its capacities.

65. Similarly, the Committee, in General Comment No. 12 (1999),120 referring to the right to adequate food (art. 11 of the International Covenant on Economic, Social and Cultural Rights), stated that

States have a joint and individual responsibility, in accordance with the Charter of the United Nations, to cooperate in providing disaster relief and humanitarian assistance in times of emergency, including assistance to refugees and internally displaced persons. Each State should contribute to this task in accordance with its ability.

66. Moreover, the same principle is also found, albeit implicitly, in the aforementioned Tampere Convention, which provides, in article 4, paragraph 2, that

A State Party requesting telecommunication assistance shall specify the scope and type of assistance required and those measures taken pursuant to Articles 5 and 9 of this Convention, and, when practicable, provide the State Party to which the request is directed and/ or the operational coordinator with any other information necessary to determine the extent to which such State Party is able to meet the request.

67. In this respect, in the Sixth Committee, among the many States denying that a duty to provide assistance upon request by an affected State does currently exist in the realm of international law, some explicitly held that view, invoking as reasons for the denial considerations based on the limits to the national capacity of States to provide assistance.

68. In the light of the preceding considerations, the Special Rapporteur cannot but reaffirm the conclusion he had already arrived at when preparing his fourth report: that the duty to cooperate in relief matters does not currently include a legal duty for States to provide assistance when requested by an affected State. This conclusion is confirmed by the overwhelming majority of States that submitted comments in the Sixth Committee in response to the Commission’s inquiry, with Mexico,121 Slovenia,122

---

120 E/C.12/1999/5, para. 38.
Singapore, Switzerland, Colombia, Austria, Germany, the United Kingdom, the Netherlands, Spain, Hungary, the Republic of Korea, Malaysia and Ireland clearly manifesting their firm belief that no such duty exists under general international law. While other delegations—Poland, Thailand, Pakistan and Sri Lanka—expressed somewhat more nuanced views on the subject, it must be pointed out that, in doing so, they were not admitting the existence of a duty of States to “provide” assistance upon request, but were rather addressing the quite distinct issue of the possible existence of a duty to “offer” assistance.

69. The foregoing notwithstanding, it must also be noted that by means of mutual arrangements, States may accept the imposition of such a duty as between the Parties thereto. Indeed, this possibility is implicitly recognized in the aforementioned article V of the 2003 resolution of the Institute of International Law. By affirming that States “should” offer assistance while intergovernmental organizations “shall” do so in accordance with their own mandates, the Institute admits that States may agree to impose on intergovernmental organizations of which they are members the positive obligation to provide assistance upon request.

70. Such a possibility is also recognized in the Convention on assistance in the case of a nuclear accident or radiological emergency, which, in article 1, paragraph 2, after formulating a general duty to cooperate to facilitate prompt assistance in the event of a nuclear accident or radiological emergency, disposes that

To facilitate such cooperation States Parties may agree on bilateral or multilateral arrangements or, where appropriate, a combination of these, for preventing or minimizing injury and damage which may result in the event of a nuclear accident or radiological emergency.

71. Inter-State agreements have been concluded establishing a duty to provide assistance on request as between the Parties thereto. Among them, mention may be made of the Agreement establishing the Caribbean Disaster Emergency Response Agency of the Caribbean Community, article 13 of which reflects the obligation undertaken by the participating States to identify, maintain in a state of readiness and make available immediately on request by the Coordinator relevant material and human resources in the event of disaster.

72. Another example may be found in the consolidated version of the Treaty on the Functioning of the European Union, whose article 222, paragraph 2, provides that

Should a [m]ember State be the object of a terrorist attack or the victim of a natural or man-made disaster, the other [m]ember States shall assist it at the request of its political authorities. To that end, the [m]ember States shall coordinate between themselves in the Council.

73. Finally, the Special Rapporteur wishes to address the issue raised in the Sixth Committee by some States that endorsed the view that, although there is no duty to provide assistance upon request, there may exist a duty to give due consideration to requests for assistance from an affected State. There is some evidence in practice to found that position.

74. Thus, the Convention on assistance in the case of a nuclear accident or radiological emergency provides, in article 2, paragraph 3, that

Each State Party to which a request for such assistance is directed shall promptly decide and notify the requesting State Party, directly or through the Agency, whether it is in a position to render the assistance requested, and the scope and terms of the assistance that might be rendered.

75. In the same sense, article 4, paragraph 3, of the Tampere Convention provides that each party to which a request for assistance is directed “shall promptly determine and notify the requesting State Party whether it will render the assistance requested, directly or otherwise”.

76. More recently, the ASEAN Agreement incorporated a similar provision, establishing, in article 4 (c), that in pursuing the objectives of the Agreement, the Parties shall “promptly respond to a request for assistance from an affected Party”.

77. And further, article 11, paragraph 4, disposes that

Each Party to which a request for assistance is directed shall promptly decide and notify the Requesting Party, directly or through the AHA Centre, whether it is in a position to render the assistance requested, and of the scope and terms of such assistance.

78. Pending the conclusion of the Commission’s consideration of the Special Rapporteur’s proposal for draft article 12, it does not appear necessary to him to indicate at the present stage a definitive position on the last issue discussed above. At any rate, the actions of an assisting State are, as much as those of an affected State, subject to the fulfilment of the principle of good faith, to which reference has been made in paragraph (9) of the commentary to draft article 10.

---

CHAPTER III

Elaboration on the duty to cooperate

79. In response to comments made in the Sixth Committee, as summarized above, the Special Rapporteur will now proceed to a further elaboration on the duty to cooperate, enshrined in draft article 5.

80. As discussed in the previous reports of the Special Rapporteur, cooperation plays a central role in the context of disaster relief and is an imperative for the effective and timely response to disaster situations. Such an essential role lends itself to further elaboration of the functional requirements of the duty to cooperate outlined in draft article 5 and the kind of coordination required by affected States and assisting actors.

81. The present analysis is, therefore, an attempt to identify the contours of the duty of cooperation in draft article 5. Admittedly, the nature of cooperation has to be shaped by its purpose, which in the present context is to provide disaster relief assistance. Seen from the larger perspective of public international law, to be legally and practically effective, the States’ duty to cooperate in the provision of disaster relief must strike a fine balance between three important aspects. First, such a duty cannot intrude into the sovereignty of the affected State. Second, the duty has to be imposed on assisting States as a legal obligation of conduct. Third, the duty has to be relevant and limited to disaster relief assistance, by encompassing the various specific elements that normally make up cooperation on this matter.

A. The nature of cooperation and respect for the affected State’s sovereignty

82. By its very nature, cooperation is likely to appear in conflict with the sovereign prerogatives of the recipient State. For example, food access to domestic populations or the use of foreign search and rescue teams might both be regarded as offensive to the traditional notion of State sovereignty. The legitimate concern to give its due to the affected State’s sovereignty has been examined extensively in the Special Rapporteur’s previous reports and the earlier discussions in the Commission. Therefore, while reaffirming that, as such, this issue remains a central consideration regarding the nature of cooperation, the present section needs to touch on it rather briefly.

83. Any attempt to provide disaster relief must take cognizance of the principle of sovereignty. In order to respect and safeguard the sovereignty of the affected State, article 5 disposes that cooperation will be implemented “in accordance with the present draft articles”. Consequently, cooperation will have to be extended in conformity with draft article 9, which places the affected State, “by virtue of its sovereignty”, at the forefront of all disaster relief assistance, limiting other interested actors to a complementary role.

84. The attempt to provide for assistance while respecting the sovereignty of the affected State is not a novel concept in international law. As indicated in paragraph (1) of the commentary to draft article 5, the Charter of the United Nations balances both concepts of sovereignty (Art. 2, para. 1), and international cooperation (Art. 1, para. 3; Arts. 13, 55 and 56). Similar balancing is achieved in the Declaration on Principles of International Law concerning Friendly Relations and Cooperation among States in accordance with the Charter of the United Nations. Likewise, such balance is reflected in General Assembly resolution 46/182 on the strengthening of the coordination of humanitarian emergency assistance of the United Nations and in the Tampere Convention.

B. The duty to cooperate, an obligation of conduct

85. The duty to cooperate is also embodied in article 17 of the final draft articles on the Law of transboundary aquifers, adopted by the Commission at its sixtieth session, in 2008. Paragraph 4 of the article reads:

States shall provide scientific, technical, logistical and other cooperation to other States experiencing an emergency. Cooperation may include coordination of international emergency actions and communications, making available emergency response personnel, emergency response equipment and supplies, scientific and technical expertise and humanitarian assistance.

86. The article calls for States to provide “scientific, technical, logistical and other cooperation” to other States experiencing an emergency, in order to ensure the protection of an aquifer. It expands upon the general obligation to cooperate in draft article 7 by describing the cooperation necessary between affected States and assisting actors in emergency situations. The commentary to article 17 indicates that the Commission established an obligation “of conduct and not result”. The commentary further states that the assistance required would relate to coordination of emergency actions and communication, providing trained emergency response personnel, response equipment and supplies, extending scientific and technical expertise and humanitarian assistance.

87. The ASEAN Declaration on Mutual Assistance on Natural Disasters of 1976 contains similar language and provides that

The Member Countries shall, within their respective capabilities, cooperate in the

(a) improvement of communication channels among themselves as regards disaster warning;
(b) exchange of experts and trainees;
(c) exchange of information and documents; and
(d) dissemination of medical supplies, services and relief assistance.

145 See, in particular, paragraphs 17, 28–29, 37, 45, 47 and 53 above.

146 Yearbook ... 2010, vol. II (Part Two), pp. 188–189.
147 General Assembly resolution 2625 (XXV) of 24 October 1970.
149 ibid., p. 41, para. (4) of the commentary.
150 ibid., p. 42, para. (9) of the commentary.
88. The establishment of an obligation of conduct rather than one of result appears in various United Nations instruments. The General Assembly, in paragraph 12 of the annex to resolution 46/182, called for the United Nations to adopt a coordinating role in the provision of emergency aid, but not for specific attainments as a result of that coordination. The Declaration on the Establishment of a New International Economic Order focuses on conduct in its call for “the strengthening, through individual and collective actions, of mutual economic, trade, financial and technical cooperation among the developing countries”.

89. The Economic and Social Council, in resolution 2008/36 of 25 July 2008 dealing with emergency humanitarian assistance, also called for specific conduct without envisaging any specific outcome, when it encourages Member States to create and strengthen an enabling environment for the capacity-building of their national and local authorities, national societies of the Red Cross and Red Crescent, and national and local non-governmental and community-based organizations in providing timely humanitarian assistance, and also encourages the international community, the relevant entities of the United Nations system and other relevant institutions and organizations to support national authorities in their capacity-building programmes, including through technical cooperation and long-term partnerships based on recognition of their important role in providing humanitarian assistance.

90. Several multilateral instruments prioritize the establishment of an obligation of conduct. The States parties to the Tampere Convention, for example, agree, in article 3, paragraph 2 (c), to “the provision of prompt telecommunication assistance to mitigate the impact of a disaster”, but not to the functioning of a given type of telecommunications network. For its part, the ASEAN Agreement, which has detailed provisions on the methods of technical and scientific cooperation, does not turn any of those provisions into obligations. Instead of, for example, agreeing to standardize their reporting methods by a certain date, the members of ASEAN agree, in article 18, paragraph 1 (b), of the ASEAN Agreement, to “promote the standardization of the reporting format of data and information”. Similarly, obligations of conduct and not result are found in the Convention on the Rights of Persons with Disabilities and the Convention on assistance in the event of disasters implies an obligation of conduct and not one of result.

91. Outside the realm of international disaster relief law proper, the obligation to cooperate as an obligation of conduct and not one of result is also embodied in bilateral treaties. Among the many examples, suffice it to mention the United States–Mexico Treaty on Agriculture, which commits both States to cooperation on fumigation of pears, but not to the eradication of the Oriental Moth.

The Agreement between the European Community and the United States of America on precursors and chemical substances frequently used in the illicit manufacture of narcotic drugs or psychotropic substances calls for “technical cooperation … in particular, training and exchange programmes for the officials concerned”, but not in requiring that those officials pass a certain predetermined knowledge test.

92. In line with other relevant international legal obligations, by its very nature, cooperation regarding the protection of persons in the event of disasters implies an obligation of conduct and not one of result.

C. Categories of cooperation

93. In the context of the present topic, the duty to cooperate has a well-defined goal, i.e. to protect persons in the event of disasters. To meet this goal in practice, the duty to cooperate most often covers activities such as “medical care, food, agricultural training, disaster relief, shelter, education, clothing, water, professional exchanges, institutional reform, technical assistance, and support of human rights and civil liberties”. The duty to cooperate must be understood as encompassing a great variety of coordinating, technical, scientific and logistical activities. Guidance as to the extent of such activities under draft article 5 can be found in other related international legal rules that specify the nature of the cooperation involved.

94. Cooperation has been addressed in specific terms in various United Nations instruments. The General Assembly, in resolution 46/182, explained how the United Nations should adopt a coordinating role and—as an indicative list—should establish a central register of all specialized personnel and teams of technical specialists, as well as relief supplies, equipment and services available within the United Nations system and from Governments and intergovernmental and non-governmental organizations, that can be called upon at short notice by the United Nations.

The Declaration on the Establishment of a New International Economic Order calls, in turn, for, inter alia, the strengthening of “technical cooperation”. Such cooperation was also called for by the Economic and Social Council in its aforementioned resolution 2008/36, which focused on humanitarian assistance. The last two instruments, however, do not elaborate on the meaning of “technical cooperation”.

95. Some multilateral instruments refer to specific categories of cooperation without accompanying them by indicative or exhaustive lists. For example, the International Covenant on Economic, Social and Cultural Rights refers to economic and technical cooperation (art. 2) and to the creation of specific programmes on the problem of hunger (art. 11). A series of environmental instruments also call for coordination on the basis of such general categories. The 1972 Declaration of the United Nations Conference on the Human Environment (“Stockholm Declaration”) provides for “accelerated development of national and international programmes and projects”.

152 United States, State Department No. 02-50, 2002 WL 1517444 (Treaty), Memorandum of understanding between the United States Department of Agriculture and the Office of the United States Trade Representative, and the Secretariat of Agriculture, Livestock, Rural Development, Fisheries and Food and the Secretariat of Economy of the United Mexican States regarding areas of food and agricultural trade, signed at Washington, D.C. and Mexico City on 29 March, and 1 and 3 April 2002.
155 Annex, para. 27.
through financial and technological assistance”, which “includes scientific information and expertise relevant to mitigating environmental degradation”. The Vienna Convention for the Protection of the Ozone Layer calls for information-sharing among all Parties to that Convention of scientific, technical, socioeconomic, commercial and legal information relevant to that Convention (art. 4, para. 1). Finally, the Montreal Protocol on Substances that Deplete the Ozone Layer appeals to developed nations to provide financial assistance and technology to less-developed nations (arts. 5 and 10).

96. Other multilateral treaties provide more detailed examples that help to clarify the general categories of cooperation that they identify. The Convention on the Rights of Persons with Disabilities indicates, in article 32, paragraph 1 (d), that “technical and economic assistance” includes “facilitating access to and sharing of accessible and assistive technologies, and through the transfer of technologies”. Similarly, the Tampere Convention, in article 3, paragraph 2 (c), calls for “the provision of prompt telecommunication assistance to mitigate the impact of a disaster”, to be accomplished by means such as “the installation and operation of reliable, flexible telecommunication resources to be used by humanitarian relief and assistance organizations” (art. 3, para. 2 (d)).

97. In an even more detailed fashion, article 18 of the ASEAN Agreement holds the following:

Technical Cooperation

1. In order to increase preparedness and to mitigate disasters, the Parties shall undertake technical co-operation, including the following:

(a) facilitate mobilisation of appropriate resources both within and outside the Parties;

(b) promote the standardisation of the reporting format of data and information;

(c) promote the exchange of relevant information, expertise, technology, techniques and know-how;

(d) provide or make arrangements for relevant training, public awareness and education, in particular, relating to disaster prevention and mitigation;

(e) develop and undertake training programmes for policy makers, disaster managers and disaster responders at local, national and regional levels; and

(f) strengthen and enhance the technical capacity of the Parties to implement this Agreement.

2. The AHA Centre shall facilitate activities for technical cooperation as identified in paragraph 1 above.

98. The Convention on assistance in the case of a nuclear accident or radiological emergency provides general headings for the type of cooperation it envisages and a detailed list of actions under each heading. For example, it allows the International Atomic Energy Agency to

(b) Assist a State [p]arty or a [m]ember State when requested in any of the following or other appropriate matters:

(i) preparing both emergency plans in the case of nuclear accidents and radiological emergencies and the appropriate legislation;

(ii) developing appropriate training programmes for personnel to deal with nuclear accidents and radiological emergencies;

(iii) transmitting requests for assistance and relevant information in the event of a nuclear accident or radiological emergency;

(iv) developing appropriate radiation monitoring programmes, procedures and standards;

(v) conducting investigations into the feasibility of establishing appropriate radiation monitoring systems.

While not exhaustive, the foregoing list gives a clear indication of many forms of cooperation allowing, by analogy, an evaluation of other possible forms.

99. In other fields, most bilateral agreements that call for some form of technical cooperation provide a list with the types of assistance that such cooperation encompasses. For example, the International Tribunal for the Former Yugoslavia concluded agreements with domestic jurisdictions to provide technical assistance and evidence for domestic trials. Those agreements mentioned the type of technical assistance involved. Additionally, the United States–Mexico memorandum of understanding on agriculture enumerated specific types of activities such as fumigation, while the United States–Republic of Korea memorandum of understanding on science and technology explained that cooperation included “research, exchanges of scientific information, scientific visits, individual exchanges, joint seminars and workshops, and other forms of activities as are mutually agreed upon”.

100. As indicated in the preceding paragraphs, instruments in the field of disaster response refer, broadly speaking, to scientific, technical and logistical cooperation. That includes the coordination of communication and the sharing of information; the provision of personnel, response equipment and supplies; and the extension of scientific and technical expertise to strengthen the response capacity of the affected State. Owing to the nature of many of the requirements of disaster relief efforts, regulatory barriers to the entry of personnel, equipment and supplies pose a particular challenge and are thus treated by a variety of international, regional and bilateral agreements. Additionally, a significant number of more recent agreements have focused on ex ante cooperation emphasizing disaster prevention and preparedness, including search and rescue arrangements, standby capacity requirements, early warning systems, exchange of information pertaining to risk identification, and contingency planning.

1. COMMUNICATION AND EXCHANGE OF INFORMATION

101. One aspect of cooperation that is frequently mentioned in disaster relief instruments is communication. The coordination of communication and exchange of information is essential to effective disaster response. Accordingly, many of the instruments that deal with

---

157 See footnote 152 above.

158 Memorandum of understanding between the National Science Foundation of the United States of America and the Korea Science and Engineering Foundation of the Republic of Korea concerning Cooperation in Science and Technology, signed at Arlington on 21 September 2000.
disaster relief also touch on the topic of information exchange.\(^{159}\) For example, the preamble of the Tampere Convention notes “the vital role of broadcasting in disseminating accurate disaster information to at-risk populations”\(^{160}\), and the Framework Convention on civil defence assistance requires the affected State to “provide all necessary information available relating to the situation, so as to ensure smooth implementation of assistance” (art. 4 (a) (1)). The Hyogo Framework for Action 2005–2015 also emphasizes the central role of information exchange, dialogue and cooperation in the context of disasters.\(^{161}\)

102. The approach taken by various instruments with regard to communications varies, as some provisions refer generally to the desirability of effective disaster relief communications or a general obligation of the affected State to facilitate communications, while others contain more specific direction pertaining to the facilitation of disaster relief communications. For example, the International Law Association model bilateral agreement provides that

in the zone of operations … the organization shall have the right to communicate by radio, telegraph, or by any other means and to establish the necessary means for the maintenance of said communications in the interior of its facilities or between these facilities and its service units.\(^{162}\)

Likewise, the Guidelines on the Use of Foreign Military and Civil Defence Assets in Disaster Relief (Oslo Guidelines) state that “the Affected State should provide to the international disaster community timely and accurate information on the nature and magnitude of the disaster, in order to enhance the effectiveness of external assistance”.\(^{163}\)

103. In the vein of substantive measures to facilitate communications, the Agreement establishing the Caribbean Disaster Emergency Response Agency provides, in article 11 (c), for the creation and maintenance of an emergency operations system to handle emergency telecommunications. The most comprehensive instrument in this area is the Tampere Convention, which provides a regulatory framework for cooperation with respect to the utilization of telecommunications and information technology in disasters.

2. SCIENTIFIC AND TECHNICAL ASSISTANCE

104. Another often-mentioned modality of cooperation is the provision of scientific, technical or technological assistance and expertise. Different classes of disasters may call for specific technologies or expertise that are either not readily available in the affected country or that are not available in sufficient degree or quantity. Consequently, a number of instruments refer specifically to the provision of scientific and technical assistance, such as the ASEAN Agreement, which, in article 18, entitled “Technical cooperation”, calls for Parties to “promote the exchange of relevant information, expertise, technology, techniques and know-how”.\(^{164}\) The Framework Convention on civil defence assistance also refers, in article 2 (a), to cooperation with regard to the exchange of expertise. Moreover, a number of bilateral agreements provide for mutual assistance in scientific and technical matters as well.\(^{165}\)

105. Technology can also enhance communication, as the utilization of telecommunications and information technology can substantially improve information exchange and increase the overall efficacy and efficiency of disaster relief efforts. The Tampere Convention deals with the provision of telecommunications assistance, including equipment, materials, information, training, radio-frequency spectrum, network or transmission capacity or other resources necessary to telecommunications. Another agreement that refers to a specific class of technological cooperation is the Charter on Cooperation to Achieve the Coordinated Use of Space Facilities in the Event of Natural or Technological Disasters (also known as the International Charter on Space and Major Disasters), which relates to coordination of satellite technology in the disaster relief context.\(^{166}\)

3. RELIEF PERSONNEL

106. Effective disaster relief also necessitates coordination with regard to the provision of emergency response personnel to strengthen the response capacity of the affected State, including medical teams, search and rescue teams, and technical specialists. A number of instruments

---

\(^{159}\) See, for example, the Agreement between Denmark, Finland, Norway and Sweden on cooperation across State frontiers to prevent or limit damage to persons or property or to the environment in the case of accidents, 1989, art. 6 (1). (“The Contracting States shall provide each other with information of importance for this agreement.”) See also Agreement among the Governments of the Participating States of the Black Sea Economic Cooperation (BSEC) on collaboration in Emergency Assistance and Emergency Response to natural and man-made Disasters (“Black Sea Agreement”), art. 4 (4).

\(^{160}\) See also article 3 (2), which calls for “the deployment of terrestrial and satellite telecommunication equipment to predict, monitor and provide information concerning natural hazards, health hazards and disasters”, and “the sharing of information about natural hazards, health hazards and disasters among the States Parties and with other States, non-State entities and intergovernmental organizations, and the dissemination of such information to the public, particularly to at-risk communities”.

\(^{164}\) Art. 18 (c). See paragraph 97 above.

\(^{165}\) See, for example, Convention on mutual assistance in combating disasters and accidents (Netherlands–Belgium) (The Hague, 14 November 1984), art. 13 (stating that the Parties should exchange all useful information of a scientific and technical nature) United Nations, Treaty Series, vol. 1526, No. 26466, p. 27, at p. 47; see also Protocol on technical cooperation and mutual assistance in the field of civil defence (Spain–Portugal) (Evora, 9 March 1992), art. 1 (2) (ibid., vol. 1730, No. 30218, p. 191); and Agreement on cooperation on disaster preparedness and prevention, and mutual assistance in the event of disasters (Spain–Argentina) (Madrid, 3 June 1988), art. IV (ibid., vol. 1689, No. 29123, p. 23).

\(^{166}\) Available from www.disasterscharter.org.
call upon States to coordinate efforts and facilitate the expedited entry of relief personnel. These include General Assembly resolutions 46/182 of 19 December 1991 and 57/150 of 16 December 2002, as well as the Measures to expedite international relief adopted by the International Conference of the Red Cross and Red Crescent Societies and the Economic and Social Council in 1977 and endorsed by the General Assembly in resolution 32/56 of 8 December 1977.

107. In addition to the entry of personnel, instruments also deal with the coordination, facilitation and supervision of the provision of assistance within the affected State. Common issues are freedom of movement, transport of personnel, access to facilities, and coordination with the affected State, including the provision of support, relevant information, guidance, and translation and interpretation services. The General Assembly, in its resolution 46/182, referred broadly to “facilitating” the work of relief teams. The Tampere Convention provides, in article 9, that “the States Parties shall, when possible, and in conformity with their national law, reduce or remove ... regulations restricting the movement of personnel who operate telecommunication equipment or who are essential to its effective use”, and the Oslo Guidelines call, in paragraph 60, for “free access to disaster zones” for relief teams. The Agreement establishing the Caribbean Disaster Emergency Response Agency provides, in articles 16 and 22, for the cooperation of the affected State in making available local facilities and services and facilitating the in-country transit of relief personnel.

108. A number of instruments, including the Framework Convention on civil defence assistance, the Tampere Convention (art. 5, para. 3), the Inter-American Convention to Facilitate Disaster Assistance, and the Oslo Guidelines deal with the identification and protection of relief personnel. The General Assembly, in paragraph 4 of its resolution 57/150, urged “all States to undertake measures to ensure the safety and security of international urban search and rescue teams operating in their territory”.

4. RELIEF SUPPLIES AND EQUIPMENT

109. Disaster relief efforts also require a variety of goods and equipment. Victims of disaster need food, clothing, medicine and other items to support their basic needs. Relief teams require equipment such as telephones, radios, computers, vehicles and construction equipment in order to operate effectively. While some goods and equipment necessary in the aftermath of a disaster may be found locally, there may be a need to import items in the event of a shortage of goods and equipment in the affected State. Owing to the nature of disasters, the rapid attainment of relief supplies is critical. Moreover, many of those items, such as food and medicine, could spoil or expire if not transported and delivered in a timely manner. Cooperation in the area of provision and facilitation of entry of relief supplies and equipment is particularly crucial because many of the necessary items are highly regulated by domestic law. Those items include foods, medicines, machines, telecommunications equipment, vehicles and rescue dogs.

110. As such, many agreements and guidelines deal with the facilitation of rapid access to disaster relief equipment and supplies. Some instruments specify those items and treat them in detail, while others make general provisions for “relief supplies and equipment”, which encompass a variety of items. The General Assembly, in its resolution 46/182, called generally for coordination to facilitate expeditious access to relief supplies and suggested that “disaster-prone countries should develop special emergency procedures to expedite the rapid procurement and deployment of equipment and relief supplies”. The Measures to expedite international relief also focus on coordination to avoid delay because of regulatory barriers.

111. Some instruments highlight equipment and supplies with specificity. The ASEAN Agreement, for example, mentions, in article 14 (a), telecommunications equipment and vehicles specifically. General Assembly resolution 46/182 and the International Convention on the simplification and harmonization of Customs procedures (“Kyoto Convention”) call on affected States to assist in the entry of medicines. The Kyoto Convention also expressly refers to “specially trained animals” among the types of relief consignments that should be prioritized for expedited processing. Several bilateral agreements, such as the Agreement between Sweden and Norway concerning the improvement of rescue services in frontier areas and the Agreement between the Swiss Federal Council and the Government of the Republic of the Philippines on Cooperation in the Event of Natural Disaster or Major Emergencies of 2001, also deal with the entry process for specially trained rescue dogs.

112. Agreements also provide for the re-export of goods to ensure that relief supplies and equipment can be efficiently redirected to where they are most needed. The ASEAN Agreement calls, in article 14 (b), for the facilitation of “the entry into, stay in, and departure from* its territory of personnel and of equipment, facilities, and materials involved or used in the assistance”. Similarly, the Tampere Convention, in article 9, paragraph 2 (d), calls for reduction of “regulations restricting the transit of telecommunication resources into, out of, and through the territory of a State party”.

113. Cooperation involves both accommodation by the affected State to expedite and facilitate the provision of relief assistance and coordination and planning by assisting actors to reduce the complications of providing relief. If assisting actors are informed of and prepare adequately for the requirements of the affected State, the process can be made more efficient. The Measures
to expedite international relief call on “donors to restrict their relief contributions to those high-priority relief needs identified by appropriate relief authorities and agencies”.174 Many instruments provide for a degree of specificity to the requests of affected States, and for assisting actors to comply with those requests. The Inter-American Convention to Facilitate Disaster Assistance, for example, states in article II (b) that

[u]pon the occurrence of a disaster the assisting State shall consult with the assisted State to receive from the latter information on the kind of assistance considered most appropriate to provide to the populations stricken by the disaster.

Communication as to the requirements, capacities and expectations of concerned parties can facilitate the relief process significantly and reduce the difficulty caused by regulation.

5. COOPERATION IN DISASTER PREPAREDNESS, PREVENTION AND MITIGATION

114. More recent conventions have shifted the focus from a primarily response-centric model to one focused largely on prevention and preparedness. Many instruments deal with not only cooperation as it pertains to relief assistance, but also with the prevention and mitigation of disasters: search and rescue arrangements, standby capacity requirements, early warning systems, exchange of information pertaining to risk assessment and identification, contingency planning and capacity-building.

115. The Hyogo Framework for Action puts a large degree of emphasis on prevention and preparedness, stating that one of the agreement’s primary objectives is “to share good practices and lessons learned to further disaster reduction within the context of attaining sustainable development, and to identify gaps and challenges”.175 The General Assembly, in resolution 46/182,176 called for cooperation in sharing scientific and technical information related to the assessment, prevention, mitigation and early warning of disasters as well as assistance to developing States to bolster their capacity in disaster prevention and mitigation, while in paragraph 7 of resolution 57/150 the Assembly more generally encouraged “the strengthening of cooperation among States at the regional and subregional levels in the field of disaster preparedness and response, with particular respect to capacity-building at all levels”.177 Other instruments call for cooperation in regard to the training of experts, research, and studies to increase preparedness, such as the ASEAN Agreement, which states, in article 19, paragraph 1, that the Parties shall individually or jointly, including in cooperation with appropriate international organizations, promote and, whenever possible, support scientific and technical research programmes related to the causes and consequences of disasters and the means, methods, techniques and equipment for disaster risk reduction.

116. In the light of all of the above, the Special Rapporteur concludes that the inclusion is warranted in the set of draft articles on Protection of persons in the event of disasters of an additional draft article concerning the elaboration of the duty to cooperate. That additional draft article, whose number and placing in the set is to be decided at a later stage, can most economically and usefully be modelled on article 17, paragraph 4, of the draft articles on the Law of transboundary aquifers, cited earlier.178 The proposed additional draft article would thus read as follows:

“Draft article A. Elaboration of the duty to cooperate

“States and other actors mentioned in draft article 5 shall provide to an affected State scientific, technical, logistical and other cooperation, as appropriate. Cooperation may include coordination of international relief actions and communications, making available relief personnel, relief equipment and supplies, scientific and technical expertise, and humanitarian assistance.”

174 Handbook... (footnote 169 above), Recommendation F.
175 A/CONF.206/6 and Corr.1, chap. 1, resolution 2, para. 10 (c).
176 Annex, paras. 5, 13 and 14.

CHAPTER IV

Conditions for the provision of assistance

117. The Commission has established in draft article 9 that an affected State, by virtue of its sovereignty, has the duty to ensure the protection of persons and to ensure the provision of humanitarian assistance on its territory. It also has the primary role to direct, control, coordinate and supervise such assistance within its territory. The Special Rapporteur will now consider the conditions that an affected State may place on the provision of assistance.

118. In determining the extent of appropriate conditions, it is necessary to reiterate the core principles of State sovereignty and non-intervention. The Special Rapporteur, in his third report, noted that “the correlating principles of sovereignty and non-intervention presuppose a given domestic sphere, or a domaine réservé, over which a State may exercise its exclusive authority”.179 In formulating his proposal for draft article 9, the Special Rapporteur took particular note of the principles of State sovereignty and non-intervention, concluding that “it is clear that a State affected by a disaster has the freedom to adopt whatever measures it sees fit to ensure the protection of the persons found within its territory”.180 As such, the affected State may impose conditions on the provision of assistance, including compliance with its national laws and fulfilling demonstrated needs.

179 See also Southern African Development Community Protocol on Health, art. 25 (b) (calling for Parties to “collaborate and facilitate regional efforts in developing awareness, risk reduction, preparedness and management plans for natural and man-made disasters”).
180 See paragraph 85 above.
119. The core principles of State sovereignty and non-intervention should be considered in the light of the responsibilities undertaken by States, in the exercise of their sovereignty, to other States and to individuals within a State’s territory and control. As recognized in the judgment in the Corfu Channel case of the International Court of Justice, “sovereignty confers rights upon States and imposes obligations on them.”\textsuperscript{181} According to the commentary of the Commission, draft article 9 reflects those obligations and “affirms the primary role held by an affected State in the response to a disaster upon its territory”.\textsuperscript{182} Therefore, any condition imposed by the affected State must be reasonable and must not undermine the duty to ensure protection of persons on its territory. Furthermore, the affected State has a corresponding duty to facilitate the prompt and effective delivery of assistance, which includes the waiver of national laws as appropriate.

A. Compliance with national laws

120. An affected State may condition the provision of assistance on compliance with its national law. A requirement of compliance with national law follows naturally from the principles stated in draft article 9, by virtue of its sovereignty: the duty to ensure the protection of persons and to ensure the provision of humanitarian assistance lies with the affected State, and it has the primary role in the direction, control, coordination and supervision of such assistance. Moreover, this principle is grounded in State practice.

121. Several multilateral treaties include a provision requiring compliance with national law. The Tampere Convention states, in article 4, paragraph 8, that “[n]othing in this Convention shall interfere with the right of a State Party, under its national law*, to direct, control, coordinate and supervise telecommunication assistance provided under this Convention within its territory”.

122. The ASEAN Agreement provides (art. 13, para. 2) that “members of the assistance operation shall respect and abide by all national laws and regulations”. Several other international agreements also require assisting actors to respect national laws\textsuperscript{183} or to act in accordance with the law of the affected State.\textsuperscript{184}

123. The General Assembly also declared, in resolution 46/182, that “cooperation [to address emergency situations] should be provided in accordance with international law and national laws*”.\textsuperscript{185} This is a clear statement that the affected State should be able to condition the provision of assistance on compliance with its national law.

124. Several non-binding and draft provisions on disaster assistance include a requirement that assisting actors respect, abide by or observe the affected State’s national law.\textsuperscript{186} Those international law instruments acknowledge the principle that assisting actors should comply with an affected State’s national law.

125. Conditioning the provision of assistance on compliance with national law creates obligations on the assisting actors. Furthermore, as an exception to the rule that the State may condition the provision of assistance on compliance with national law, the affected State must facilitate prompt and effective assistance.

1. Obligation of assisting actors to cooperate in compliance with national laws

126. In deference to the right of the affected State to condition the provision of assistance on compliance with national law, there is a corresponding obligation on assisting actors to provide assistance in compliance with the national law and authorities of the affected State. The obligation to respect the national law and authorities of the affected State arise out of respect for the sovereignty of the affected State and the principle of cooperation, reaffirmed in draft article 5.

127. Three obligations on assisting actors flow from the general principle that assistance be provided in compliance with the national laws and authorities of the affected State. First, there is an obligation on members of the relief operation to observe the national laws and standards of the affected State. Second, there is an obligation of the head of the relief operation to ensure the observance of the national laws and standards of the affected State. Finally, there is the obligation to cooperate with national authorities.\textsuperscript{187}

128. First, there is an obligation on personnel of the relief operation to observe the national laws and standards of the affected State. An articulation of this general principle is found in annex X, paragraph 1, of the Convention on the Transboundary Effects of Industrial Accidents: “The personnel involved in the assistance operation shall act in accordance with the relevant laws of the requesting Party.” The Inter-American Convention states, in article XI (d), that:

assistance personnel have the obligation to respect the laws and regulations of the assisted State and of States they may cross en route. Assistance personnel shall abstain from political or other activities that are inconsistent with said laws or with the terms of this Convention.

\textsuperscript{181} Corfu Channel case, Judgment of April 9th, 1949, I.C.J. Reports 1949, p. 4, Separate Opinion by Judge Alvarez, at p. 43. See Yearbook ... 2011, vol. II (Part Two), p. 157, commentary to art. 9, para. (2).

\textsuperscript{182} Yearbook ... 2011, vol. II (Part Two), p. 157, commentary to art. 9, para. (1).

\textsuperscript{183} See, for example, Inter-American Convention to Facilitate Disaster Assistance, art. VIII XI (d); and Convention on assistance in the case of a nuclear accident or radiological emergency, art. 8 (7).

\textsuperscript{184} Ibid.; Black Sea Agreement (footnote 159 above), arts. 5 and 9.

\textsuperscript{185} Annex, para. 5.

\textsuperscript{186} See, for example, IFRC, Introduction to the Guidelines for the Domestic Facilitation and Regulation of International Disaster Relief and Initial Recovery Assistance, Geneva, IFRC, 2008 (hereinafter “IFRC Guidelines”), guideline 4 (1); Max Planck Institute for Comparative Public Law and International Law (Peter Macalister-Smith), International Guidelines for Humanitarian Assistance Operations (hereinafter “Max Planck Institute Guidelines”), Heidelberg, 1991, paras. 9 (b) and 22 (d); and Council of Europe, recommendation Rec (2002) 3, of the Committee of Ministers to member States on transfrontier cooperation in civil protection and mutual assistance in the event of natural and technological disasters occurring in frontier areas, adopted by the Committee of Ministers at the 786th meeting of the Ministers’ Deputies, 6 March 2002, appendix, para. 9.

\textsuperscript{187} See ASEAN Agreement, art. 13 (2) (“Members of the assistance operation shall respect and abide by all national law and regulations. The Head of the assistance operation shall take all appropriate measures to ensure observance of national laws and regulations. The receiving Party shall cooperate to ensure that members of the assistance operation observe national laws and regulations.”).
Similarly, the Agreement among the Governments of the Participating States of the Black Sea Economic Cooperation (BSEC) on collaboration in Emergency Assistance and Emergency Response to natural and man-made Disasters (hereinafter the “Black Sea Agreement”) states that “the members of the assistance team are obliged to observe the State laws and rules of the Requesting Party”.

129. Second, the head of the relief operation of the assisting State, international organization or other humanitarian actor has a duty to ensure the observance of the national laws and standards of the affected State. This duty was articulated in article 13, paragraph 2, of the ASEAN Agreement: “The Head of the assistance operation shall take all appropriate measures to ensure observance of national laws and regulations”. This obligation flows naturally from the general understanding that the head of the relief operation is generally responsible for the “immediate operational supervision of the personnel”.

130. Third, in order to comply with national laws and pursuant to obligations to cooperate under draft article 5, the assisting State has an obligation to cooperate with national authorities. The International Guidelines for Humanitarian Assistance Operations (“Max Planck Institute Guidelines”) provide that “at all times during humanitarian assistance operations the assisting personnel shall … cooperate with the designated competent authority of the receiving State”. Similarly, the IFRC Guidelines state that “assisting actors and their personnel should … coordinate with domestic authorities”. The United Nations Institute for Training and Research (UNITAR) Model Rules for Disaster Relief Operations (1982) (hereinafter “UNITAR Model Rules”) have elaborated on the purpose of such an obligation:

Relief personnel shall cooperate at all times with the appropriate authorities of the receiving State to facilitate the proper administration of justice, secure the observance of police regulations and prevent the occurrence of any abuse in connection with the facilities granted.

2. EXCEPTION FOR THE AFFECTED STATE TO FACILITATE PROMPT AND EFFECTIVE ASSISTANCE

131. As articulated in draft article 9, the affected State has the duty to ensure the protection of persons on its territory. As such, the right to condition the provision of assistance on compliance with national law is not absolute. The exception to this rule is that the affected State has a duty to facilitate the provision of prompt and effective assistance, under its sovereign obligations to its population. States have an obligation to assist in compliance with national law and an obligation to examine whether certain national laws must be waived in the event of a disaster.

132. First, States have an obligation to assist in compliance with national law. The obligation to ensure prompt and effective assistance includes an obligation to provide relevant information to assisting actors. Article 3, paragraph 1, of the Black Sea Agreement provides that “the Parties shall cooperate … in order to provide prompt relevant information and assistance in case of natural or man-made disasters”. This duty extends to an obligation of the affected State to cooperate to ensure the observance of national law, as illustrated by article 13, paragraph 2, of the ASEAN Agreement: the “receiving Party shall cooperate to ensure that members of the assistance operation observe national laws and regulations”.

133. As part of the duty to cooperate to ensure the observance of national law, the affected State has an obligation to provide assisting actors with relevant laws, including those relating to privileges and immunities and regulatory barriers. This obligation extends only to laws that are relevant in the disaster context. As stated in the IFRC Guidelines:

Affected States should make available to assisting actors adequate information about domestic laws and regulations of particular relevance to the entry and operation of disaster relief or initial recovery assistance.

134. Second, in certain circumstances, an affected State may be required to waive provisions of its law in order to facilitate the prompt and effective provision of assistance in order to fulfill its duty to ensure the protection of persons on its territory. As noted in the memorandum by the Secretariat, “national laws are, generally speaking, not well suited for the purpose of creating a ‘humanitarian space’ in the wake of a disaster since compliance can prove onerous and costly in terms of both resources and time lost.” A waiver of national law by the affected State of its national laws should promote access to and the timeliness of the delivery of assistance.

135. International instruments currently recognize several instances when national laws must be waived in order to facilitate prompt and effective assistance: privileges and immunities, visa and entry requirements, customs requirements and tariffs, and quality and freedom of movement. Waiver of national law in each of these fields should not be required in every circumstance, but rather should be reasonable when balancing the affected State’s duty to provide assistance and its obligation to protect its population from harm in the light of the particular circumstances.

136. The first instance when national laws must be amended or waived concerns the privileges and immunities of actors participating in disaster relief operations. The Convention on assistance in the case of a nuclear accident or radiological emergency requires an affected State requesting assistance to provide certain privileges and immunities to assisting actors, including immunity from arrest, detention and legal process (art. 8, para. 2 (a)). An agreement between Austria and the Federal Republic of Germany also requires the affected

188 Art. 9 (3). See also IFRC Guidelines, guideline 4 (1); and Max Planck Institute Guidelines, para. 22 (d).
189 Convention on the Transboundary Effects of Industrial Accidents, annex X (1).
190 Max Planck Institute Guidelines, para. 22 (b).
191 IFRC Guidelines, guideline 4 (1).
193 196
194 See also Max Planck Institute Guidelines, para. 19 (c).
195 Guideline 4 (1).
196 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 70.
197 Ibid., paras. 105 and 106.
State to extend “protection” to the emergency teams of assisting States.\footnote{197} The Framework Convention on civil defence assistance also states, in article 4 (a) (5): “The Beneficiary State shall, within the framework of national law, grant all privileges, immunities, and facilities necessary for carrying out the assistance”.

137. The second instance when national laws must be amended or waived concerns visa and entry requirements. The League of Red Cross Societies has long noted that entry requirements and visas serve as a “time-consuming procedure which often delays the dispatch of such delegates and teams”,\footnote{198} thus delaying the vital assistance the affected State has a duty to provide. The ASEAN Agreement, in article 14 (b), requires an affected State to “facilitate the entry into, stay in and departure from its territory of personnel and equipment, facilities and materials involved or used in the assistance”. The Convention on assistance in the case of a nuclear accident or radiological emergency includes a similar provision (art. 8, para. 5). Specific bilateral agreements have also allowed entry to assisting actors without obtaining entry permits in the event of a disaster.\footnote{199} In addition to those waivers of entry requirements, the Tampere Convention, in article 9, paragraphs 1 and 3 (d), also requires affected States to remove regulatory barriers, including recognizing foreign operating licences in the field of telecommunications. There are also numerous international agreements requiring unencumbered passage through transit States regardless of entry or visa requirements.\footnote{200}

138. Some agreements, such as the Inter-American Convention to Facilitate Disaster Assistance, the Tampere Convention and the ASEAN Agreement, do not require a waiver of entry and visa requirements, but simply require States to use their existing national laws to allow entry.\footnote{201} However, the better requirement may be to recognize that a waiver is required in order to promote the prompt and effective provision of assistance in the event of a natural disaster because of the concerns noted by the League of Red Cross Societies.

139. The third instance in which national law may be amended or waived concerns an affected State’s, and even transit States’, customs requirements and tariffs on assistance in the event of a natural disaster. That requirement reduces costs and delays with respect to transit States in the event of a natural disaster, promoting prompt and effective assistance.\footnote{202} Some international instruments require facilitation of entry of goods and equipment relating to disaster relief. Other instruments additionally require that such goods and equipment not be taxed.

140. With respect to facilitating the clearance of customs, Specific Annex J, Chapter 5, article 2, of the Kyoto Convention requires that “clearance of relief consignments for export, transit, temporary admission and import be carried out as a matter of priority”.\footnote{203} The Tampere Convention and the ASEAN Agreement contain similar provisions.\footnote{204} In addition, bilateral treaties\footnote{205} and General Assembly resolution 57/150 of 16 December 2002 urge affected States to reduce formalities in order to facilitate entry of goods and equipment. With respect to waiving tariffs, duties or import taxes, the Inter-American Convention to Facilitate Disaster Assistance also includes a provision (art. V) that waives “taxes, fees, and other charges” for vehicles, equipment and supplies. The ASEAN Agreement and the Black Sea Agreement contain similar provisions.\footnote{206}

141. The fourth instance when national laws must be amended or waived concerns national laws and regulations related to quality of goods and equipment imported for disaster relief. As noted in the memorandum by the Secretariat, waiver of laws related to quality is for the purpose of “ensur[ing] that existing laws and regulations in place to assure quality in various settings do not have the effect of limiting effective disaster relief operations”.\footnote{207} Some agreements exempt goods imported for the purpose of disaster relief from any national regulation entirely.\footnote{208}

\footnote{197} Article 9 (3) of Agreement concerning mutual assistance in the event of disasters or serious accidents (Austria–Federal Republic of Germany) (Salzburg, 23 December 1988) (United Nations, Treaty Series, vol. 1696, No. 29224, p. 61).

\footnote{198} Resolution adopted by the League of Red Cross Societies Board of Governors at its 33rd session, Geneva, 28 October–1 November 1975.

\footnote{207} A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 201.

\footnote{208} See, for example, Agreement on mutual assistance in the event of disasters or serious accidents (with exchange of notes), (Denmark–Federal Republic of Germany) (Tonder, 16 May 1985) (United Nations, Treaty Series, vol. 1523, No. 26375, p. 95), art. 5 (5); IFRC Guidelines, guideline 17 (1) (b).
The Agreement between the Republic of Austria and the Federal Republic of Germany concerning mutual assistance in the event of disasters or serious accidents,209 the Measures to expedite international relief of the International Red Cross and Red Crescent Movement and the UNITAR Model Rules210 suggest that affected States may have to waive import restrictions, such as for certain medical products. Some instruments require waiver for rescue animals and food restrictions.211

142. The final instance when national laws may be waived in the event of a natural disaster concern freedom of movement. Some international law instruments only require a State to remove internal obstacles to assisting actors entering the disaster area. The UNITAR Model Rules provide that an affected State must permit assisting “personnel freedom of access to, and freedom of movement within, disaster stricken areas that are necessary for the performance of their specifically agreed functions”.212 The 2003 resolution on humanitarian assistance adopted by the Institute of International Law includes a similar provision.213

143. Although some national laws encourage opening disaster areas to assisting actors,214 other States continue to place restrictions on assisting actors in their national laws or regulations. Japanese law allows local officials to prohibit the entry of non-emergency personnel in the event of danger to personnel.215 The law of Nepal includes a provision allowing the Government to require assisting actors to receive permission before entering a disaster area.216

144. Some international instruments suggest that the affected State may have an obligation to facilitate entry into the disaster area. The General Assembly, in resolution 46/182, required the United Nations Emergency Relief Coordinator to facilitate “the access by the operational organizations to emergency areas for the rapid provision of emergency assistance by obtaining the consent of all parties concerned”.217 A small number of bilateral agreements require that the affected State permit and facilitate access to a disaster area, and even provide transportation to assisting actors.218

145. Although it is reasonable for the national laws described above to be waived in some circumstances, an absolute requirement that those laws be waived in every circumstance would prevent a State from exercising its sovereignty to protect its population and persons within its territory and control. For example, an absolute requirement of waiver of quality regulations might interfere with an affected State’s duty to protect its population from goods that the State in good faith believes to be harmful. The balance between the need to facilitate timely assistance while also preserving minimum standards concerning the quality of assistance is reflected in the Max Planck Institute Guidelines, which urge States to “waive any prohibitions, restrictions or regulations which would otherwise delay the importation of humanitarian assistance consignments, to the extent compatible with reasonable health and safety standards”.219 Therefore, rather than a strict and absolute requirement of waivers in a natural disaster, the affected State should consider the reasonableness of the waiver under the circumstances and balancing its obligations to provide prompt and effective assistance and to protect its population.

B. Identifiable needs and quality control

146. Affected States may condition the provision of assistance on the identifiable needs of the persons concerned and the quality of assistance, in furtherance of the purpose of the present draft articles “to facilitate an adequate and effective response to disasters that meets the essential needs of the persons concerned”.220 The Commission has emphasized the discretionary power of the affected State to choose the assistance “most appropriate to its specific needs” in the commentary to draft article 10.221 In exercising this discretionary power and in accordance with the principle that the affected State’s Government is “best placed to determine the gravity of an emergency situation and to frame appropriate response policies”,222 the affected State should undertake a needs assessment. The affected State may impose quality conditions for the provision of assistance to ensure that its identified needs are effectively met. In reference to draft article 2 explaining the purpose of the present draft articles, “the link between a high-quality (‘adequate and effective’) response and meeting the needs of the persons concerned” was underscored in the Commission.223 The affected State should facilitate the provision of high-quality, effective assistance by specifying the scope and type of assistance requested, in line with its duty to cooperate under draft article 5.224

209 Art. 7 (5).
211 See, for example, Agreement between the Swiss Federal Council and the Government of the Republic of the Philippines on Cooperation in the Event of Natural Disaster or Major Emergencies, art. 8 (2) (footnote 162 above); Measures to expedite international relief (footnote 169 above), recommendation D; UNITAR Model Rules, annex A, rule 7.
212 Annex A, rule 16.
213 Art. VII, para. 3 (see footnote 117 above).
214 Order No. 48/1999 (XII.15) of the Minister of the Interior on the disaster protection tasks of organs subordinated to the Minister of the Interior (Hungary), sects. 15 (3) (c) and (d); Law on Disaster Protection (Mongolia), art. 30 (2).
215 Disaster Countermeasures Basic Act, June 1997 (Japan), art. 63.
216 Act to Provide for the Relief Work relating to the Natural Calamity, 1982 (Nepal), para. 4 (a).
217 Annex, para. 35 (d).
218 See, for example, Agreement concerning the United States relief assistance to the Chinese people (China–United States of America) (with exchange of notes) (Nanking, 27 October 1947), United Nations, Treaty Series, vol. 12, No. 178, art. V (a) and (b).
219 Para. 21 (b).
221 Ibid., p. 160, commentary to art. 10, para. (10): “The phrase ‘as appropriate’ was adopted by the Commission to emphasize the discretionary power of an affected State to choose from among various States, the United Nations, competent intergovernmental organizations, and relevant non-governmental organizations the assistance that is most appropriate to its specific needs.”
222 Ibid., commentary to art. 9, para. (4): “The primacy of an affected State is also informed by the long-standing recognition in international law that the government of a State is best placed to determine the gravity of an emergency situation and to frame appropriate response policies.”
1. IDENTIFIABLE NEEDS

147. The affected State’s right to condition the provision of assistance on identifiable needs enables the State to ensure the protection of persons on its territory. Thus, the ability to condition the provision of assistance on identifiable needs allows fulfillment of draft article 9, which recognizes the affected State’s primary role in directing, controlling and coordinating disaster relief on its territory. The State’s ability to condition assistance on identifiable needs is also fully consistent with the principles of humanity, neutrality and impartiality identified in draft article 6 and the duty to cooperate recognized in draft article 5.

148. According to the memorandum by the Secretariat, conditioning disaster relief assistance on identifiable needs is a valid constraint on the provision of such assistance. Multilateral instruments regulating the provision of relief assistance emphasize the importance of allocating assistance directly in proportion to needs. Article 72, paragraph 2, of the Partnership agreement between the members of the African, Caribbean and Pacific Group of States and the European Community and its member States (Cotonou Agreement), for example, establishes a general requirement that humanitarian and emergency assistance be granted “exclusively according to the needs and interests of victims of disasters”. Similarly, the General Assembly, in paragraph 2 of resolution 54/233 of 22 December 1999, provided that humanitarian assistance for natural disasters “should be determined on the basis of the human dimension and needs arising out of the particular natural disaster”. In the particular context of food supplies, the Food Aid Convention, 1999, submits that food aid should be “consistent with the dietary habits and nutritional needs of recipients” (art. III (j)).

149. A number of model rules and draft guidelines reiterate the emphasis on allocation of assistance in proportion to needs. In explaining the rationale for inclusion of the phrase “as appropriate” in draft article 10 on the duty of the affected State to seek assistance, the Commission notes that it sought to emphasize the discretion of an affected State to choose “assistance that is most appropriate to its specific needs” from among different assisting entities. Under the IFRC Guidelines, assisting actors should calculate aid priorities “on the basis of need alone” (guideline 4 (2) (a)), disaster relief should be “adequate for the needs of affected persons” (guideline 4 (3) (b)) and assisting States and organizations should inspect all goods and equipment to ensure “appropriateness for the needs in the affected State” (guideline 17 (3)). The UNITAR Model Rules require that the assisting State consult with the affected State “with respect to the needs of the receiving State” (annex A, rule 2 (2)). The Mohonk Criteria state that assistance should be allocated in proportion to needs (sect. III (2) (a)). The Max Planck Institute Guidelines likewise stipulate that humanitarian assistance should be “suitable for meeting the assessed needs in every respect” (guideline 15).

150. Although numerous texts support the principle of needs-based allocation of disaster relief assistance, other factors have been mentioned in the Sixth Committee that might validly influence the distribution of relief assistance, including economic considerations relating to the capability to provide assistance and the importance of assessing proportionality of needs on a case-by-case basis. In addition, it has been noted that the General Assembly, in paragraph 2 of resolution 54/233, envisioned consideration of the “human dimension”, implying that allocation of humanitarian assistance is not limited to a strict proportional provisioning of resources based on need.

2. NEEDS ASSESSMENT

151. An affected State that conditions the provision of assistance on its linkage to identifiable needs must clearly identify such needs. It has been noted that an affected State may undertake a needs assessment on its own or jointly in cooperation with an assisting State. Cooperation between States in undertaking needs assessments reflects the duty to cooperate enshrined in draft article 5. The ASEAN Agreement, in article 11, paragraph 3, provides that the affected State shall either specify the assistance required to the assisting entity or, if this is not practicable, assess and decide upon the assistance required, jointly and in consultation with the assisting entity. The Food Aid Convention, in article VIII (b), also foresees an “evaluation of needs by the recipient and the members, within their own respective policies”, in order to determine the provision of food aid. That instrument further provides, in article VIII (g), that States parties should seek to develop a “common approach to needs analysis” by consulting with each other at the regional and recipient State level when food aid needs are identified. Likewise, the process described by the UNITAR Model Rules (annex A, rule 2 (2)) involves the assisting State consulting with the designated national authority of the receiving State.

152. A role is also envisioned for humanitarian agencies in needs assessments. The Economic and Social Council, in paragraph 8 of resolution 2002/32, encouraged humanitarian agencies to strengthen humanitarian information centres by “providing timely and accurate information on assessed needs, and the activities developed to respond to them”. Accordingly, the International Recovery Platform conducts post-disaster needs assessments, which harmonize the assessment, analysis and prioritization of needs by various stakeholders. The Balkan National Societies’ Recommended Rules and Practices suggest that States “ascertain the needs of the victims for humanitarian assistance and their number”.

225 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 76.
226 Yearbook … 2011, vol. II (Part Two). See also IFRC Guidelines, guidelines 4 (2), 4 (3) and 17 (3); UNITAR Model Rules, annex A, rule 2 (2); and Ebersole, “The Mohonk Criteria for humanitarian assistance in complex emergencies: Task force on ethical and legal issues in humanitarian assistance”.
228 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 80.
alongside “competent international relief agencies which offer their assistance.” Along these lines, since 1991 OCHA has facilitated the implementation of Common Humanitarian Action Plans based on needs assessments and other strategic planning.

153. It should be noted that a needs assessment is not limited to the context where the affected State has conditioned provision of assistance on linkage to identified needs. It has been stated that a needs assessment is appropriate where an instrument requires the affected State to specify the scope and type of assistance requested. In such a case, the needs assessment forms the basis of the information provided regarding the scope and type of assistance.

3. QUALITY CONTROL

154. International instruments provide that the affected State may condition aid on quality including, inter alia, safety, nutrition and cultural appropriateness, encouraging members of the public to assist States in providing only those relief goods requested by the affected State and discouraging the provision of unnecessary or inappropriate goods. The ASEAN Agreement, for example, provides in article 12, paragraph 4, that “the relief goods and materials provided by the assisting entity should meet the quality and validity requirement of the Parties concerned for consumption and utilization.” Article III (j) of the Food Aid Convention declares that all products provided as food aid shall meet international quality standards, be consistent with the dietary habits and nutritional needs of recipients and, with the exception of seeds, shall be suitable for human consumption.

155. The memorandum by the Secretariat explained that certain provisions aim to assure that disaster relief assistance is of a sufficiently high quality as to provide a benefit, rather than a potential harm, to recipients. Under this general concept of quality, many different provisions exist, including those seeking to assure that disaster relief is geographically and culturally relevant, that it is timely, and that it is coordinated so as to assure non-redundancy of assistance.

156. The ability of an affected State to condition the provision of aid on quality is not limited to the quality of the goods themselves, but also applies to the quality of assistance workers deployed in the affected State. The General Assembly, in resolution 57/150, urged States to deploy search and rescue teams that complied with internationally developed standards including training, equipment and cultural awareness. The IFRC Guidelines expand on the notion of quality conditions to include quality of coordination efforts, consistent with draft article 5, and quality of personnel.

4. SCOPE AND TYPE

157. As a corollary to draft articles 5 and 9, the affected State should specify the scope and type of assistance it is seeking if the provision of assistance is conditioned on quality. As has been previously explained, certain bilateral treaties contain a provision to the effect that “the Party requesting assistance must specify the nature and scope of the assistance which it requires and must, to the extent possible, provide the other Party with the information which the other Party needs in order to determine the scope of the assistance.” Providing assisting States with relevant information specifying the type and scope of the conditions on quality both helps to facilitate the affected State’s duty to protect its citizens and take the lead in relief efforts under draft article 9 and also to cooperate with assisting States, as provided by draft article 5.

158. In upholding the duty to protect victims of natural disasters and the duty to cooperate with assisting States, when requesting assistance the affected State shall specify the scope and type of assistance it is requesting. The Tampere Convention provides that “a State Party requesting telecommunications assistance shall specify the scope and type of assistance required.” The ASEAN Agreement (art. 11, para. 3) requires the affected State to “specify the scope and type of assistance required and, where practicable, provide the assisting entity with such information as may be necessary for that Party to determine the extent to which it is able to meet the request.” As noted previously in the discussion relating to needs assessment, the ASEAN Agreement also acknowledges, consistent with draft article 9, that in many instances the affected State may not be capable of specifying the scope and type of assistance required, and in such instances,

235 Ibid.
236 IFRC Guidelines, guideline 18 (3) (“assisting States and eligible assisting humanitarian organizations should take all reasonable steps to ensure the quality, appropriateness and safety of any such medications and equipment ….”).
237 Ibid., guideline 5 (2) (“All States should actively encourage members of the public interested in contributing to international disaster relief or initial recovery to make financial donations where possible or otherwise donate only those types of relief goods expressly requested by the affected State.”).
238 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 194.
239 General Assembly resolution 57/150 of 16 December 2002, para. 5 (“The General Assembly ... further urges all States that have the capacity to provide international urban search and rescue assistance to take the necessary measures to ensure that international urban search and rescue teams under their responsibility are deployed and operate in accordance with internationally developed standards as specified in the Guidelines of the International Search and Rescue Advisory Group, particularly concerning timely deployment, self-sufficiency, training, operating procedures and equipment, and cultural awareness.”).
240 Guideline 4 (3) (“To the greatest extent practicable, their disaster relief and initial recovery assistance should also be ... (b) adequate for the needs of affected persons and consistent with any applicable international standards of quality; (c) coordinated with other relevant domestic and assisting actors; (d) provided and conducted in a manner that is sensitive to cultural, social and religious customs and traditions ... (f) provided by competent and adequately trained personnel”).
241 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 199.
242 Tampere Convention, art. 4 (2). This reiterates the IFRC Guidelines, guideline 1 (3) (“While affirming the principal role of domestic authorities and actors, they recommend minimum legal facilities to be provided to assisting States and to assisting humanitarian organizations that are willing and able to comply with minimum standards of coordination, quality and accountability.”).
assisting States shall collaborate in the needs assessment as it relates to quality.245

159. Other international instruments place the onus of consultation and coordination on the assisting, rather than the affected, State. The Inter-American Convention to Facilitate Disaster Assistance provides that

upon the occurrence of a disaster the assisting State shall consult with the assisted State to receive from the latter information on the kind of assistance considered most appropriate to provide to the populations stricken by the disaster.244

Bilateral treaties also acknowledge, as explained above in paragraphs 151–153, concerning the discussion of linking aid to needs on a case-by-case basis rather than on a directly proportional basis, that a case-by-base analysis that does not include operational detail may also be appropriate.245

160. The IFRC Guidelines place a reciprocal duty on both assisting States and the affected State to specify the scope, type and needs of assistance that are available and offered or needed and sought. Guideline 10 (2) declares that

requests and offers for assistance should be as specific as possible as to the types and amounts of goods as well as the services and expertise available or required, respectively. Affected States may also wish to indicate particular types of goods and services likely to be offered that are not needed.

This reciprocal duty is most consistent with the importance of cooperation among States underlying draft article 5 and with the reality that the victims of natural disasters in the affected State may benefit from quality specification coming from assisting States, thus further enabling the affected State to fulfill its duty under draft article 9.

C. Limitations on conditions under international and national law

161. The right of the affected State to impose conditions for the delivery of assistance is qualified by an obligation that such conditions comply with international and national laws246 as well as treaty obligations.247 Although such provisions textually modify general requirements for the delivery of aid, they have a clear application to the conditions an affected State may impose on assisting States, because an affected State is not to require actions in contravention of obligations otherwise stated. Consequently, although an affected State may impose conditions, including the retention of control over the provision of assistance and requirements that any assistance comply with specific national laws, such conditions may not abrogate otherwise existing duties under national and international law.248 Further, such conditions may not contravene the provisions of any treaties, conventions or instruments to which the affected State is a party.249 Rather, where discrepancies between agreements to which either the affected or the assisting States are parties, conditions on the provision of assistance should conform with those provisions that “afford[ed] the greatest degree of assistance in the event of disaster and favo[red] support and protection to personnel providing assistance”25 (Inter-American Convention to Facilitate Disaster Assistance, art. XV).

245 ASEAN Agreement, art. 11 (3) (“In the event that it is not practicable for the requesting party to specify the scope and type of assistance required, the requesting party and assisting entity shall, in consultation, jointly assess and decide upon the scope and type of assistance required.”). See also Convention on assistance in the case of a nuclear accident or radiological emergency, art. 2 (2) (reiterating that “a State Party requesting assistance shall specify the scope and type of assistance required and, where practicable, provide the assisting party with such information as may be necessary for that party to determine the extent to which it is able to meet the request. In the event that it is not practicable for the requesting State to specify the scope and type of assistance required, the requesting State Party and the assisting party shall, in consultation, decide upon the scope and type of assistance required.”).

244 Art. II (b). This is in contrast to the Convention on the Transboundary Effects of Industrial Accidents, art. 12 (1), for example, which places the onus of specifying the scope and type of aid on the affected State: “If a Party needs assistance in the event of an industrial accident, it may ask for assistance from other Parties, indicating the scope and type of assistance required.” See also Black Sea Agreement, art. 4 (2) (“The assistance shall be provided upon request, wherein the requesting party specifies: —place, time, character and scale of the disaster, and current state of the emergency in the affected area; —actions already carried out, specification of the required assistance, setting the priorities of the requested disaster relief.”); Agreement on cooperation and mutual assistance in cases of accidents (Estonia–Finland) (footnote 199 above), art. 6 (“The Party requesting assistance must specify the nature and scope of the assistance which it requires.”); Protocol on technical cooperation and mutual assistance in the field of civil defence (Spain–Portugal) (footnote 165 above), art. 3 (7) (“The overall management of operations shall, in all cases, be the responsibility of the authorities of the territory in which the disaster occurs. Nevertheless, the units of the donor country shall act through their own national leaders, whom the head of the expedition shall apprise of the objectives and missions to be accomplished.”).

246 See Agreement on reciprocal assistance in case of disasters or major accidents (France–Switzerland) (Bern, 14 January 1987) (United Nations, Treaty Series, vol. 1541, No. 26745), art. 4 (“The nature, extent and procedures for the provision of assistance shall be determined by mutual agreement between the authorities mentioned in article 3, on a case-by-case basis.”); Agreement concerning mutual assistance in the event of disasters or serious accidents (Austria–Germany) (footnote 199 above), art. 4 (“The type and extent of assistance to be provided shall be agreed upon by the authorities referred to in article 3 case by case, without necessarily going into operational detail.”). See also Council of the European Union decision 2001/792/EC, Euratom, of 23 October 2001, art. 5 (3) (explaining that specific limitations and details of execution of assistance intervention shall only be provided by the affected State when necessary: “The requesting Member State shall be responsible for directing assistance interventions. The authorities of the requesting Member State shall lay down guidelines and, if necessary, define the limits of the tasks entrusted to the intervention teams, without giving details of their execution, which are to be left to the person in charge appointed by the Member State rendering assistance.”).

247 See footnote 199 above.

248 ASEAN Agreement, art. 30 (“The provisions of this Agreement shall in no way affect the rights and obligations of any Party with regard to any existing treaty, convention or instrument to which they are Parties.”); Inter-American Convention to Facilitate Disaster Assistance, art. XV (“If there is any discrepancy between this Convention and other international agreements on the subject to which the assisting and assisted states are parties, the provision that affords the greatest degree of assistance in the event of disaster and favours support and protection to personnel providing assistance shall take precedence.”).

249 See footnote 246 above.

250 ASEAN Agreement, art. 30.
162. The Special Rapporteur noted in his third report that State sovereignty rights with respect to emergency assistance must be balanced against other obligations under international law principles, particularly the humanitarian principles of humanity, neutrality and impartiality as embodied by the Commission in draft article 6 (humanitarian principles in disaster response), as well as human dignity (draft article 7) and human rights (draft article 8). Further, the Commission has found that such principles should not be construed in a limiting fashion, as only those explicitly enshrined in international agreements, but rather as “obligations applicable on States by way of customary international law, [including] assertions of best practices.” Consequently, State obligations under international law pertaining to, inter alia, the environment and sustainable development may also serve to circumscribe the conditions an affected State may impose for the provision of assistance. Where the national laws of an affected State provide protections in excess of international standards and the affected State has not agreed to waive such additional protections in order to facilitate the delivery of assistance, assisting States must comply with the national laws of the affected State.

Applicable principles that may serve to balance the right of an affected State to impose conditions on the delivery of assistance are detailed below.

1. Core Humanitarian Obligations

163. As stated in General Assembly resolution 46/182, “humanitarian assistance must be provided in accordance with the principles of humanity, neutrality and impartiality.” That formulation reflects the language of the Secretary-General in his 2009 report entitled “Strengthening the coordination of emergency humanitarian assistance of the United Nations”:

Respect for and adherence to the humanitarian principles of humanity, neutrality, impartiality and independence are therefore critical to ensuring the distinction of humanitarian action from other activities, thereby preserving the space and integrity needed to deliver humanitarian assistance effectively to all people in need.

164. These humanitarian principles are discussed extensively in the Special Rapporteur’s third report. They are found in a number of documents, including the

— See General Assembly resolution 46/182, annex, para. 2; IFRC Guidelines, art. 4 (2).
— Statement by the Chairman of the Drafting Committee, Yearbook ... 2010, vol. I, 306/7th meeting.
— See, for example, General Assembly resolution 46/182, annex, para. 5 (see also para. 123 above); IFRC Guidelines, guideline 4 (1) (“Assisting actors and their personnel should abide by the laws of the affected State.”); and Max Planck Institute Guidelines, para. 22 (d) (“assisting personnel [shall] respect and observe the laws and customs of the receiving State”).
— Annex, para. 2.

Fundamental Principles of the Red Cross. The African Union Convention for the Protection and Assistance of Internally Displaced Persons in Africa (the Kampala Convention) provides that “States Parties shall uphold and ensure respect for the humanitarian principles of humanity, neutrality, impartiality and independence of humanitarian actors.” Conditions set by affected States on the acceptance of aid must not contravene those principles.

165. States may not impose conditions for the provision of assistance that do not comport with the principle of humanity. This principle initially developed in humanitarian law, but has since been recognized as applying in both war and peace. In the Corfu Channel case, the International Court of Justice found that the obligations incumbent on State authorities were based “on certain general and well-recognized principles, namely: elementary considerations of humanity, even more exacting in peace than in war”.

166. The principle of humanity is extended to the context of disaster relief by the Oslo Guidelines and the Mohonk Criteria, which affirm that “human suffering must be addressed wherever it is found”. The dignity and rights of all victims must also be respected and protected. The Kampala Convention, in article 3, paragraph 1 (c), requires that States Parties “respect and ensure respect for the principles of humanity and human dignity of internally displaced persons”. Humanity is a fundamental principle of IFRC, and its guideline 4, paragraph 1, recommends that assisting actors and their personnel should abide by the law of the affected State and applicable international law, coordinate with domestic authorities, and respect the human dignity of disaster-affected persons at all times.

The principle of humanity, therefore, requires that affected States, in imposing conditions for the provision of aid, do so only in ways that respect the human dignity of those affected.

167. Conditions imposed for the provision of aid by an affected State must adhere to the principle of neutrality. The principle of neutrality is described by the International Red Cross and Red Crescent Movement as the notion that humanitarian assistance should be provided without “tak[ing] sides in hostilities or engag[ing] at any time in
168. The incidence of a disaster does not absolve an affected State from its obligation to refrain from promulgating conditions for the provision of aid that violate the principle of impartiality. The principle of impartiality, which is commonly understood to include non-discrimination, refers to the doctrine that aid must be provided “without discriminating as to ethnic origin, gender, nationality, political opinions, race or religion. Relief of the suffering of individuals must be guided solely by their needs and priority must be given to the most urgent cases of distress”. All human rights instruments take into account the principle of non-discrimination either explicitly or implicitly. For example, the Charter of the United Nations describes, in Article 1, paragraph 3, one of the purposes of the Organization as follows:

To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion.

169. Impartiality and non-discrimination are not per se violated, however, by conditions that funnel aid to those with the most urgent needs. Other agreements, such as the Convention and Statute establishing an International Relief Union, make explicit the applicability of the principle of non-discrimination in the context of disaster relief. Non-discrimination is addressed specifically in the context of emergency situations in the International Covenant on Civil and Political Rights, which allows suspension of certain obligations “provided that such measures … do not involve discrimination solely on the ground of race, colour, sex, language, religion or social origin”. It therefore follows that affected States are not free to derogate from the principle of impartiality in conditioning their acceptance of aid.

2. HUMAN RIGHTS

170. While States have broad latitude in specifying the kind and extent of assistance they need, they may not place restrictions on assistance that compromise their obligations under international law. Existing human rights obligations under human rights law do not cease in the wake of a disaster. As outlined by the Special Rapporteur in his fourth report, disasters implicate numerous human rights, such as the rights to food and water and the right to adequate housing. The affected State may not impose restrictions on assistance that will violate or infringe upon those rights.

171. Similarly, a State’s obligations to vulnerable or disadvantaged groups, such as women, children, people with disabilities and indigenous or minority cultural groups, continue to apply in a disaster situation. In fact, disaster situations may impose added duties on States to ensure the safety of vulnerable populations. For instance, the Convention on the Rights of Persons with Disabilities requires, in article 11, that States take “all necessary measures to ensure the protection and safety of persons with disabilities in situations of risk, including … the occurrence of natural disasters”.

172. The Hyogo Framework for Action 2005–2015 underscores the importance of human rights considerations in the disaster-planning process, urging States to adopt “a gender perspective” in disaster risk management and to take into account “cultural diversity, age, and vulnerable groups” in disaster risk reduction. To the extent that humanitarian assistance contributes to disaster planning and risk management, affected States must condition acceptance on the assurance that the aid will provide adequately for vulnerable groups.

3. RECONSTRUCTION AND SUSTAINABLE DEVELOPMENT

173. In its commentary to draft article 1 on Scope, the Commission indicated that the scope ratione temporis “is primarily focused on the immediate post-disaster response and recovery phase, including the post-disaster reconstruction phase”. To the extent that reconstruction is a continuation of relief efforts and starts almost immediately after a disaster occurs, sustainable development considerations might come into play early in the disaster

---

266 Resolution VIII of the Twentieth International Conference of the Red Cross (Vienna, 1965), International Review of the Red Cross, No. 56 (November 1965), p. 573.

267 See, for example, Council of the International Institute of Humanitarian Law, “Guiding principles on the right to humanitarian assistance”, April 1993, preambular para. 5 (“Stressing that humanitarian assistance, both as regards those granting and those receiving it, should always be provided in conformity with the principles inherent in all human activities; the principles of humanity, neutrality, and impartiality, so that political considerations should not prevail over those principles.”) (International Review of the Red Cross, No. 297 (1993), p. 521). See also Plattner, “ICRC neutrality and neutrality in humanitarian assistance”, p. 165 (“Returning to the essence of neutrality and allowing it a scope which encompasses its possible implications in peacetime, neutrality may therefore be understood as a duty to abstain from any act which, in a conflict situation, might be interpreted as furthering the interests of one party to the conflict or jeopardizing those of the other”).

269 Ibid., p. 380, para. 28.

273 Non-discrimination is addressed specifically in the context of emergency situations in the International Covenant on Civil and Political Rights, which allows suspension of certain obligations “provided that such measures … do not involve discrimination solely on the ground of race, colour, sex, language, religion or social origin”. It therefore follows that affected States are not free to derogate from the principle of impartiality in conditioning their acceptance of aid.
response process and merit, therefore, some brief reference here. This is not to ignore that reconstruction remains different from relief work and that the rights and obligations of States in the two contexts may differ considerably. When assistance will contribute to reconstruction efforts, the affected State may be required to condition its acceptance on the assurance that reconstruction will ameliorate, not just restore, previous conditions. For instance, the International Covenant on Economic, Social and Cultural Rights identifies, in article 12, paragraph 1, the universal right to “housing, and to the continuous improvement of living conditions”. Improving living conditions in the wake of a disaster that has destroyed settlements may require an affected State to ensure that new housing will be more resilient to future disasters and that future land use decisions will not perpetuate vulnerabilities.

174. Similarly, the international goal of sustainable development is highlighted in the wake of a disaster. As the Hyogo Framework for Action notes, in paragraph 13, “disaster risk reduction is a cross-cutting issue in the context of sustainable development and therefore an important element for the achievement of internationally agreed[- upon] development goals.” Those goals have been set in principle 4 of the Rio Declaration on Environment and Development, which provides that “in order to achieve sustainable development, environmental protection shall constitute an integral part of the development process and cannot be considered in isolation from it.”

175. Agenda 21, adopted at the 1992 United Nations Conference on Environment and Development in Rio de Janeiro, echoes this principle, setting forth as a broad objective the promotion of “human settlement development through environmentally sound physical planning and land use”. Furthermore, in the disaster context, it recognizes the importance of post-disaster reconstruction in “mitigating the negative impact of natural and man-made disasters on human settlements, national economies and the environment”.

176. The Millennium Declaration lists respect for nature as a “fundamental value” that is “essential to international relations”, and asserts that “prudence must be shown in the management of all living species and natural resources, in accordance with the precepts of sustainable development.” The Declaration identifies international cooperation “to reduce the number and effects of natural and man-made disasters” as a key means to protecting the environment.

177. The Hyogo Framework for Action also emphasizes the nexus between disaster risk reduction and sustainable development and the importance of cooperation among States and the international community in developing the “knowledge, capacities and motivation needed to build disaster-resilient nations and communities.” The Framework further specifies that post-disaster humanitarian assistance should be used “in such a way that risks and future vulnerabilities will be lessened as much as possible”. That language suggests that affected States should, to the extent possible, ensure that the assistance they receive will enable them to develop safely and sustainably.

4. OBLIGATIONS UNDER NATIONAL LAWS

178. In addition to complying with international law, conditions on the delivery of assistance must comply with national laws. An affected State may condition its acceptance of aid on compliance with its national laws. Affected States also have an obligation to follow their own national laws when they set conditions for the provision of aid. This obligation derives from the well-established duty to respect the rule of law. This obligation does not restrict the ability of affected States to modify or waive certain laws when necessary to facilitate the provision of aid.

179. International law requirements restricting conditions that may be imposed by affected States constitute a baseline for the obligations of affected States to their populations, and should not be considered exhaustive. Affected States may enact national laws that provide protections to their populations in excess of international standards and condition their acceptance of aid on compliance with such higher standards. This principle is well supported by the core duty of States to respect the rule of law, which is foundational in the history of international law.

180. Consequently, affected States have a duty to respect and follow their own laws when imposing conditions for the provision of aid. While an affected State may enter into agreements with other States to modify or harmonize its national laws in order to facilitate the provision of external assistance, such agreements may not abrogate national standards for other purposes. Where no such agreement exists, assisting States must comply with the national laws of the affected State, even where they impose higher standards than those existing under international law.

181. Bearing the foregoing considerations in mind, the Special Rapporteur proposes the following draft article:

“Draft article 13. Conditions on the provision of assistance

“The affected State may impose conditions on the provision of assistance, which must comply with its national law and international law.”
CHAPTER V

Termination of assistance

182. The draft articles adopted thus far provide a framework for the affected State to guide the provision of assistance to suit its needs. Draft article 9 ensures that the affected State maintains direction, control, coordination and supervision of any assistance provided. Draft article 11 gives the affected State the right to refuse an offer of assistance, but not arbitrarily. The foregoing suggests that when an affected State does accept an offer of assistance, it retains a measure of control over the duration for which that assistance will be provided, and assisting actors are correspondingly obliged to leave the territory of the affected State upon request. Both parties remain duty-bound to cooperate according to draft article 5, and the context of termination of the assistance is no exception. The instruments addressing this question echo this duty by routinely articulating a preference for a collaborative approach in which both parties reach an amicable agreement on when the period of assistance will come to an end and the assisting actor will leave the territory.

183. International instruments bearing on this topic have addressed termination of assistance in a number of ways. As the memorandum by the Secretariat has acknowledged, “termination provisions contain subtle differences in formulation which could have a significant impact in practice”.291

184. Several instruments mark the end of the period of assistance with a notification from either party. Thus, the Tampere Convention provides, in article 6, paragraph 1, that the requesting State Party or the assisting State Party may, at any time, terminate telecommunication assistance received or provided … by providing notification in writing. Upon such notification, the States Parties involved shall consult with each other to provide for the proper and expeditious conclusion of the assistance.

The draft convention on expediting the delivery of emergency assistance provides that the receiving State or an assisting State or organization may give notice of termination of assistance and where necessary the Parties to this Convention which are affected by such notice shall then arrange to bring the assistance to an orderly conclusion under the terms of this Convention.292

Similarly, IFRC Guidelines state that

When an affected State or an assisting actor wishes to terminate disaster relief or initial recovery assistance, it should provide appropriate notification. Upon such notification, the affected State and the assisting actor should consult with each other.293

185. A China–United States agreement of 1947 allowed the receiving State to terminate the agreement “whenever it deems that such relief assistance is provided in this Agreement is no longer necessary”, but established a series of conditions necessary for the assisting State to terminate the assistance.296 The Nordic Mutual Emergency Assistance Agreement in connection with radiation accidents297 provides that a receiving State may request termination of disaster relief assistance at “any time”, but that the assisting State may only terminate its assistance if, in its opinion, certain conditions are met.

186. Some instruments allow the affected State to request the termination of assistance, after which both parties shall consult with each other to that effect. For example, article 11 of the Convention on assistance in the case of a nuclear accident or radiological emergency provides that the requesting State … may at any time, after appropriate consultations [with the assisting actor] and by notification in writing, request the termination of assistance received … under this Convention. Once such a request has been made, the parties involved shall consult with each other to make arrangements for the proper conclusion of the assistance.

The Agreement establishing the Caribbean Disaster Emergency Response Agency (art. 20, paras. 2 and 3), the Convention on the Transboundary Effects of Industrial Accidents (annex X, para. 10) and the Max Planck Institute Guidelines298 include similar provisions.

187. Bearing the foregoing in mind, the Special Rapporteur proposes the following draft article:

“Draft article 14. Termination of assistance

“The affected State and assisting actors shall consult with each other to determine the duration of the external assistance.”

291 A/CN.4/590 and Add.1–3 (see footnote 2 above), para. 247.
293 Guideline 12.
294 Art. 13 (1): “The requesting party may cancel its request for assistance at any time. The requesting party shall inform the assisting party immediately about its decision.”
295 See Agreement between the Government of the Republic of Mozambique and the Government of the Republic of South Africa regarding the Coordination of Search and Rescue Services (footnote 199 above), art. 12 (“This Agreement may be terminated by either Party giving written notice through the diplomatic channel to the other Party of its intention to terminate this Agreement”).
296 Agreement concerning the United States relief assistance to the Chinese people (China–United States) (footnote 218 above), art. IX.
297 Art. X (“1. The requesting State may at any time in writing request the termination of the assistance provided under this Agreement … 3. Upon such request for, or notice of, termination the requesting State and the assisting party shall consult together with a view to concluding any operations in progress at the time of such termination and facilitating withdrawal of the assistance”).
298 Max Planck Institute Guidelines, para. 18 (“The receiving State … may determine in consultation with the assisting State or organization the moment of … termination of such assistance”) and para. 23 (“The assisting State or organization and the receiving State shall cooperate to resolve any irregularities, difficulties or disputes arising … upon the termination of humanitarian assistance operations”).
Related developments

188. During the period between the Commission’s sixty-third session and the date of the present report, two related developments deserve to be singled out.

189. The third session of the Global Platform for Disaster Risk Reduction was held in Geneva from 8 to 13 May 2011. It built on the findings and recommendations of the Global Platform second session in 2009, as well as the results of the midterm review of the Hyogo Framework for Action and the 2011 Global Assessment Report on Disaster Risk Reduction. The Platform Chair’s Summary highlights consensus points and outlines critical steps to be taken.

190. The 31st International Conference of the Red Cross and Red Crescent was held in Geneva from 28 November to 1 December 2011. On the occasion of the Conference, IFRC made available a pilot version of a Model Act for the Facilitation and Regulation of International Relief and Recovery Assistance, consisting of 71 articles together with commentaries. It was intended that a final version be produced by the end of 2012. By its resolution 7, entitled “Strengthening disaster law”, the Conference, inter alia, welcomed the efforts to develop a model act “to assist States interested in incorporating the recommendations of the IDRL Guidelines into their legal frameworks” (para. 5) and invited “further consultation with States and other stakeholders on the use of the model act as a reference tool” (para. 6). As is known, the IFRC International Disaster Response Laws, Rules and Principles (IDRL) Programme, launched in 2001, developed the Guidelines for the domestic facilitation and regulation of international disaster relief and initial recovery assistance, adopted at the 30th International Conference in 2007. The IFRC has announced that its IDRL programme has become the IFRC Disaster Law Programme.

300 IFRC, OCHA and the Inter-Parliamentary Union, Geneva, November 2011.
